

GENERAL INFORMATION

Product Description

EUT is a radio transmitter that operate at 433.920 MHz; it is used in garage door opener applications with radio receivers of the Multipass and Roll series.

It has two pushbuttons being capable of activating to different channels on a radio receiver working with the same code and the same operating frequency.

It works on 433.920 MHz frequency regulated by a saw oscillator. It is provided with a built in antenna and it does not permit a continuous transmission (operation is limited to about two seconds).
