

Reference FCC ID: ON3MPSTP2EB

As stated in Test Report RD 99/153 of October 13th, 1999 page 14/23 the applicable limit for this kind of EUT is Section 15.231 (periodic operation).

The report contains data of the fundamental and harmonics emissions (worst case as stated in the report) all other harmonics detected were less than 20 dB from the limit; EUT does not emit any other kind of spurious emissions: the only oscillator present in the circuit is the TX SAW oscillator.

Regards

G. Mecchia (Test Engineer of TUV QSL - Scarmagno (TO) Italy)
