Menu Operation

The following Menu Operation is based on the assumption that you use remote control. If you are connected to the DTR5000N and want to maneuver the Menu System at your PC, you should get into the Menu System using "Telnet" command. The Menu structure is the same. So, separate explanation for the Telnet menu is not given. For the Telnet operation, please refer to "How to get into Menu System from your PC using Telnet" and "Key stroke with your PC keyboard" in System Set-up.

Main Menu

Main menu shows the following information.

Channel Guide	Shows general information about each channel such as Channel Name, LNB Number, PID Number.
Channel List	Shows the whole channel list registered in DTR5000N
Parental Control	Allows only those people with knowledge of the PIN code to watch the programs.
Installation	Allows you to set up various parameters on LNB configuration, System Settings, LAN Settings, etc.
AccessGate	Shows AccessGate System Information.
About DTR5000N	Shows the version information of DTR5000N software

- Turn on TV and your DTR5000N after you have connected all peripheral devices to it.
- Press the Menu button of the remote control. You will get the Main Menu on the TV screen as follows.

- You can move into submenus by selecting each menu.
- Press the Menu button to return to previous menu. Or press Exit to quit the Menu system completely.

Channel Guide

TV, Radio, and Data Channel Guide

Here you can see the information about Channel Name, LNB Number, Number of PIDs, and PID Types.

- In Main Menu, select Channel Guide. Then you will see TV Guide display as follows. You can change the channel by pushing the Up/Down keys.
- When you push " ♫ " on the Remote Control, you can select TV, Radio, and Data Guide.
