1. Sorry for the typo, frequency range should be 2412 to 2455MHz.
2. The manufacturer has agreed to limit their upper frequency to 2455MHz in order to meet the requirements in the restricted band at 2483.5MHz.
3. Attached you will find a new block diagrams.
4. The gain of the Yagi is 17dBi and the Parabolic is 24dBi. I've attached processing gain information.
5. Attached you will find new radiation measurements.
6. The Processing gain is 13.4dB.
7. The Theory of operation is attached.
8. The schematics have been sent to you by the manufacturer on 9/28.
9. I've sent a revised request for confidentiality letter. Only the schematic should remain confidential.

Please let me know if you need any further information.

Thanks for your help.

BEST REGARDS,

Sid Sanders
