

Antenna Connector information for Carlson Wireless FT-512

FCC ID: OPA-FT-512

Rule part: 15.203, 15.204

The internal antenna connects to the radio antenna port via reverse SMA.

When using an external antenna, the internal antenna cable is disconnected. The N connector mounted on the side of the EUT housing has a short cable with a reverse SMA connector. This cable is connected to the radio antenna port, and a 24 dBi parabolic reflector antenna is connected to the N-connector.

The FT512 is not sold to the general public, and the use of an external antenna with Model FT-512 Trailblazer Pro system mandates professionally trained personnel to ensure compliance with FCC rules and regulations.
