**Object: IMEI SECURITY declaration**

Myself Enrico Salvatori declares on behalf of TELIT Mobile Terminals S.p.A. the following:

1. The IMEI is stored in a flash EEPROM at locations (addresses) only known by Telit Mobile Terminals.  
The way for writing or modifying these locations is only possible with software, equipment and know how specific of Telit Mobile Terminals people.  
The software for writing the IMEI in the flash EEPROM is not resident in the Mobile Station GM825, and is downloaded in the RAM only for this purpose in Telit Mobile Terminals factory. At the end of the IMEI writing cycle, this program is cleared by the RAM and is no more at disposal of anyone.
2. The replacement of the EEPROM is not an easy task and in most cases will damage the printed circuit board; the programming of the new EEPROM requires the knowledge at point 3.
3. All the system (equipment and know how) for writing the IMEI on them GM825 mobile station is in complete and direct control of Telit Mobile Terminals, and is not accessible to external people.

Enrico Salvatori
