Declaration for SAT600 working conditions

Dear Sir or Madam,

I hereby declare that the Telit SAT600 satellite phone cannot be used in a body worn position.

The phone in a body worn position with the antenna inserted cannot receive the satellite signal and therefore it cannot either transmit since it operates on a receive-before-transmit basis. To work properly the antenna needs to be extracted and kept free from obstacles: this operation is not practicable when the phone is body worn.

Sincerely,
On behalf of Telit Mobile Terminals S.p.A

Sandro Spanghero
