Electromagnetic Compatibility

Test of: Central Network Controller (CNC),
including power supply

Model Number: 25396 (Central Network Controller),
Model no. not supplied for Power Supply

Applicant: PAC International Ltd

Test Type: Compliance

Test Specification: FCC CFR47, parts 15.107/15.207,
15.109 and 15.209.

Test Result: Complied

SGS Serial Number: DUR 24097/EMC/LS/02

Date of Receipt: 20th May 2002

Date of Test(s): 27th May 2002 – 29th May 2002

Date of Issue: 10th January 2003

Issue Number: 3

This report refers only to the sample submitted for test.

This report shall not be reproduced except in full without the written approval of the testing laboratory.

1. Client Information

Company Name: PAC International Ltd

Address: 1 Park Gate Close,
Bredbury,
Stockport,
SK6 2SZ.

Contact Person: Shaun Byrne

Telephone: 0161 406 3400

Facsimile: 0161 430 8658

2. Details Of Test Laboratory

Company Name: SGS International Electrical Approvals

UKAS Accreditation Number: 1116

Address: South Industrial Estate,
Bowburn,
Co. Durham,
DH6 5AD.

Contact Persons: Mr Alan Reynard

Telephone: 0191 377 2000

Facsimile: 0191 377 2020

3. Equipment Under Test (EUT)

3.1 Identification Of EUT

Model Number:	25396 (Central Network Controller / CNC), Model no. not supplied for Power Supply
Unique Identifier:	Unique identifier not supplied for CNC, 1984493 (Power Supply)
Description of EUT:	Central Network Controller, including Power Supply
Internal Clock Frequencies: (Maximum)	32 MHz – CNC <108 MHz (Power Supply)
Supply Voltage:	120v ac, 60 Hz
Classification:	Intentional and Unintentional Radiator (CNC), Unintentional Radiator (Power Supply)
Accessories Supplied:	None

4. Test Specification, Methods and Procedures

4.1 Test Specification(s)

Specification(s)	Title
FCC CFR 47 : October 1999 Parts 15.107/15.207, 15.109 and 15.209	Code Of Federal Regulations

4.2 Purpose Of Test

To perform the relevant tests and assess the product for compliance with the above specification.

4.3 Methods and Procedures

The standards listed on the previous page refer to the following tests: -

CFR 47 Clause	Test
15.107/15.207	Conducted Emissions (Intentional and Unintentional Radiator)
15.109 (30-1000 MHz)	Radiated Emissions (Intentional and Unintentional Radiator)
15.209 (9 kHz to 30 MHz)	Radiated Emissions (Intentional Radiator)

5. Deviations or Exclusions from the Test Specifications

There were no deviations from the test specifications.

6. Operation of the EUT During Testing / Configuration and Peripherals

6.1 Operation of EUT during testing.

Refer to individual test results sections for details of EUT operation during testing.

6.2 Configuration and Peripherals

The central network controller (cnc) connects to the power supply via a low voltage dc cable. During tests, this cable was bundled to 1m in length.

The controller has the following additional ports, terminated as indicated:

- i) 5 signal ports, terminated with various resistors at the end of 1m lengths of cable
- ii) 1 reader port, with 1m cable attached to it (lead unterminated)

The power supply has a battery backup port – this was terminated with a typical battery via a 1m lead.

Note: terminations as provided by client.

7. Test Results

7.1 General Comments

The test methods used are referred to in the individual test results sections of this test report.

7.2 Modifications Made to the EUT

No modifications were made to the EUT during the testing process.

7.3 Summary of Test Results

CFR 47 Clause	Test	Result
15.107/15.207	Conducted Emissions	Complied
15.109	Radiated Emissions 30-1000 MHz (Intentional and Unintentional Radiator)	Complied
15.209	Radiated Emissions 9 kHz to 30 MHz (Intentional Radiator)	Complied

Result

In the configuration tested, the EUT complies with the test standard detailed above.

Full details of all tests can be found in the test results section of this report.

7.4 Conducted Emissions Test Results – 15.107/15.207

CFR 47 Clause:	15.107/15.207
Limits:	CISPR 22, Class B (As specified in FCC document FCC 02-157 (ET Docket No. 98-80), adopted May 23 rd 2002).
Frequency Range	0.15 – 30 MHz

Operating Mode

The compliance test was performed whilst the central network controller had an authorised card presented to its reader.

383.984	37.74	46.4	Vertical

¹Indicates typical noise floor figures of test equipment.

NOTE 1: The test results shown have automatically been corrected to account for Antenna factors, pre-amplifier gain and cable losses, via measurement software.

NOTE 2: Vertical antenna polarity was worst case for all emissions, hence results for horizontal antenna polarity were not recorded.

NOTE 3: Measurements were performed at a test distance of 3m and extrapolated to an equivalent 10 m value by deducting an extrapolation factor of 20 dB decade, hence a correction factor of -10.46dB was used.

Test Method

As per ANSI 63.4 : 1992

Measurements performed at a test distance of 3m.

Measurement detector details: Quasi-Peak, 120 kHz bandwidth

Radiated Emissions Test Configuration

Radiated Emissions Environmental Conditions

Power Supply (to controller)	120V AC, 60Hz
Temperature	9°C
Relative Humidity	67%
Barometric Pressure	986mb

Radiated Emissions Measurement Uncertainties

Frequency	± 200kHz
Amplitude	± 4.6dB

The uncertainties stated are calculated in accordance with the requirements of UKAS with a confidence level of 95%.

7.6 Radiated Emissions Test Results – 15.209

CFR Clause	15.209
Frequency Range	9 kHz to 30 MHz

Operating Mode

The compliance test was performed whilst the central network controller had an authorised card presented to its reader.

Test Results

Peak Measurements

Frequency MHz	Corrected Peak Measurement** (dB μ V/m)	Limit (dB μ V/m)	Measurement Distance (metres)
*0.125	-26.38	25.66	300
0.050	-14.31	n/a*	300
0.993	11.39	27.66	30
0.149	-42.21	24.14	300
0.248	-49.15	19.71	300
0.298	-48.84	18.11	300
0.348	-48.81	16.77	300
0.375	-35.65	16.12	300
0.447	-53.31	14.59	300
1.125	-12.58	26.58	30

*n/a: Emission found to be generated by the power supply unit (an unintentional device) which is not subject to the Intentional radiator limits.

*Indicates EUT carrier frequency. The supply voltage to the controller was varied between 85% and 115% to maximise the carrier level.

¹Indicates typical noise floor figures of test equipment.

Test Method

As per ANSI 63.4 : 1992

** Measurements performed at a test distance of 1m and extrapolated to correct distance of 300m and 30m respectively using a factor of 40 dB/decade. Hence a correction factor of – 99.08 for 300m and –59.08 for 30m was used. The corrected levels are shown above.

Measurement detector details: Peak Detector, 300 Hz bandwidth where $F \leq 150\text{kHz}$, 10 kHz bandwidth where $F > 150\text{kHz}$

Radiated Emissions Test Configuration**Radiated Emissions Environmental Conditions**

Power Supply (to controller)	120V AC, 60Hz
Temperature	9.5°C
Relative Humidity	63%
Barometric Pressure	982mb

Radiated Emissions Measurement Uncertainties

Frequency	$\pm 200\text{kHz}$
Amplitude	$\pm 4.6\text{dB}$

The uncertainties stated are calculated in accordance with the requirements of UKAS with a confidence level of 95%.
