Re: VersiCam Wireless Module
P/N: 493473801
FCC ID: OVHCAM-VC2W

This device is intended for use with the VersiCam Wireless system. It is used in a point to multi-point transmitter system with up to four remote devices. It will be used for sending vehicle detection data to the traffic control cabinet.

The module must be installed onto a VersiCam Camera or VersiCam Base Station only. The equipped VersiCam Camera or Base Station will be mounted to a signal pole or similar at heights above 12' at road intersections or at other similar locations for vehicle detection purposes.

Marketing of this module and the VersiCam Wireless system is restricted to trade shows and trade publications. This system is available for purchase and will be installed professionally by authorized Iteris dealers only. Training classes are offered regularly through out the year for any new workers entering this field of work.

A handwritten signature in black ink, appearing to read "William Lee".
