Hi Dennis,

With this PC2, we are just taking board from one device and putting it inside of new plastic housing. The photograph from original filing shows that there is plenty of empty room inside of original housing (attached). New housing will be just a tighter fit. PWB is the same in both versions except there is now a small hole in the middle of PWB to make it possible to have a screw keeping the plastic parts together.

Please let me know if you still need more information as your original correspondence seems like misunderstanding of our explanation.

Best Regards,
Kare
