Harris seeks application approval for a Class 2 Permissive Change on the MASTR III Base Station in the 800 MHz band.

Test report is provided as a filing exhibit, substantiating operational performance requirements. The pre-driver device used in the amplifier portion of the station is no longer available and has been replaced by another manufacturer's device. The amplifier input attenuator device has also been replaced by another manufacturer's device. The devices are not direct drop-in replacements, therefore the PCB artwork has been updated to accommodate the new devices. No new accessories are being introduced, nor antennas. Conducted power range remains the same as the original Grant.

Confidentiality Letter and Rheintech Labs Agent Authorization Letter, to act on Harris' behalf for this change request, have been provided as exhibits as well.

Thank you for your kind consideration and timely review of this product change.

Sincerely,

A handwritten signature in black ink, appearing to read "J. Johnson", written over a horizontal line.

Jeremy Johnson
Regulatory Manager
