

Federal Communications Commission  
Washington DC  
November 4, 2008

Gentlemen,

Please grant Class 2 permissive change that will allow us to add a low power mode for field programming this unit.

This special low power mode will operate in the same licensed band of frequencies but at a low power level, 1mW. We need to use a dedicated frequency for programming regardless of the site license at which units will be programmed. This will allow the same programming tool to be used at all locations deploying our system. The low power field programming tool will only be used by trained professionals.

W. J. Brennan Jr.
