

## Engineering Test Report No. 2402798-01

Report Date	February 4, 2025	
Manufacturer Name	Milwaukee Electric Tool Corporation	
Manufacturer Address	13135 West Lisbon Road Brookfield, WI 53005	
Product Name	One Key 7.25in Circular Saw	
Model No.	2835-20	
Date Received	January 8, 2025	
Test Dates	January 8, 2025 – January 10, 2025	
Specifications	FCC "Code of Federal Regulations" Title 47 Part 15, Subpart C, Section 15.247 Innovation, Science, and Economic Development Canada, RSS-GEN Innovation, Science, and Economic Development Canada, RSS-247	
Test Facility	Elite Electronic Engineering, Inc. 1516 Centre Circle, Downers Grove, IL 60515	FCC Reg. Number: 269750 IC Reg. Number: 2987A CAB Identifier: US0107
Signature		
Tested by	Edwin Casas	
Signature		
Approved by	Raymond J. Klouda, Registered Professional Engineer of Illinois – 44894	
PO Number	MF-1727775	

This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

This report shall not be reproduced, except in full, without the written approval of Elite Electronic Engineering Inc.

Elite Electronic Engineering Incorporated certifies that the information contained in this report was obtained under conditions which meet or exceed those specified in the FCC "Code of Federal Regulations" Title 47 Part 15, Subpart C, Section 15.247 and Innovation, Science, and Economic Development Canada, RSS-247 test specifications. The data presented in this test report pertains to the EUT on the test dates specified. Any electrical or mechanical modifications made to the EUT subsequent to the specified test date will serve to invalidate the data and void this certification. This report must not be used to claim product certification, approval, or endorsement by A2LA, NIST, or any agency of the Federal Government.

## 1. Report Revision History

Revision	Date	Description
–	5 FEB 2025	Initial Release of Engineering Test Report No. 2402798-01

## 2. Introduction

### 2.1. Scope of Tests

This document presents the results of a series of RF emissions tests that were performed on the Milwaukee Electric Tool Corporation One Key 7.25in Circular Saw (hereinafter referred to as the Equipment Under Test (EUT)). The EUTs were manufactured and submitted for testing by Milwaukee Electric Tool Corporation located in Brookfield, WI.

### 2.2. Purpose

The test series was performed to determine if the EUTs meets the RF emission requirements of the FCC "Code of Federal Regulations" Title 47, Part 15, Subpart C, §15.247 for a Digital Modulation intentional radiator operating within the 2400 – 2483.5MHz band.

The test series was also performed to determine if the EUT meets the RF emission requirements of the Innovation, Science, and Economic Development Canada Radio Standards Specification RSS-Gen and Innovation, Science, and Economic Development Canada Radio Standards Specification RSS-247 for a Digital Modulation intentional radiator operating within the 2400 – 2483.5MHz band.

Testing was performed in accordance with ANSI C63.10-2013.

### 2.3. Identification of the EUT

The EUTs were identified as follows:

EUT Identification	
EUT #1	
Product Description	One Key 7.25in Circular Saw
Model/Part No.	2835-20
Serial No.	40100068D, 4010050D, 4010053D, 4010231D
Size of EUT	16"x 6.5"x11.5"
Software/Firmware Version	8.1.7.9
Device Type	Digitally Modulated Transmission Device
Band of Operation	2400 – 2483.5MHz
Modulation Type	GFSK
Antenna Type	Trace
Conducted Output Power	6.1dBm
6dB Bandwidth	804.02kHz
Occupied Bandwidth (99% CBW)	1.053MHz
EUT #2	
Product Description	One Key 7.25in Circular Saw UI/BLE Board (Conducted Sample)
Model/Part No.	2835-20
Serial No.	860310067
Size of EUT	1.5"x1.5"
Software/Firmware Version	8.1.7.9
Device Type	Digitally Modulated Transmission Device
Band of Operation	2400 – 2483.5MHz
Modulation Type	GFSK
Antenna Type	Trace
Conducted Output Power	6.1dBm
6dB Bandwidth	804.02kHz
Occupied Bandwidth (99% CBW)	1.053MHz

### 3. Power Input

The EUTs were powered by 18VDC from a rechargeable battery pack.

### 4. Grounding

The EUTs were not connected to ground.

### 5. Support Equipment

No support equipment was used during the tests.

### 6. Interconnect Leads

No interconnect leads were used during the tests.

### 7. Modifications Made to the EUT

No modifications were made to the EUTs during the testing.

### 8. Modes of Operation

The EUTs and all peripheral equipment were energized. The EUTs were programmed to transmit in one of the following modes:

Mode	Description
2402MHz	Continuous transmission at the low BLE channel.
2440MHz	Continuous transmission at the mid BLE channel.
2480MHz	Continuous transmission at the high BLE channel.
Production Tx	Production code used to calculate duty cycle. Dut was connected to an M18 AC/DC Dust Extractor via BLE for Duty Cycle Factor test.

### 9. Test Specifications

The tests were performed to selected portions of, and in accordance with the test specifications.

- Federal Communications Commission "Code of Federal Regulations", Title 47, Chapter I, Subchapter A, Part 15, Subpart C
- ANSI C63.10-2013, "American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices"
- Federal Communications Commission Office of Engineering and Technology Laboratory Division, Guidance For Compliance Measurements On Digital Transmission Systems, Frequency Hopping Spread Spectrum System, and Hybrid System Devices Operating Under Section 15.247 April 2, 2019 KDB 558074 D01v05r02
- RSS-Gen Issue 5, February 2020, Amendment 2, Innovation, Science, and Economic Development Canada, "General Requirements for Compliance of Radio Apparatus"
- RSS-247 Issue 2, February 2017, "Digital Transmission Systems (DTSs), Frequency Hopping Systems (FHSs) and Licence-Exempt Local Area Network (LE-LAN) Devices"

### 10. Test Plan

No test plan was provided. Instructions were provided by personnel from Milwaukee Electric Tool Corporation and used in conjunction with the FCC "Code of Federal Regulations" Title 47 Part 15, Subpart C, Section 15.247, Innovation, Science, and Economic Development Canada, RSS-247, and ANSI C63.4-2014

specifications.

## 11. Deviation, Additions to, or Exclusions from Test Specifications

There were no deviations, additions to, or exclusions from the test specifications during this test series.

## 12. Laboratory Conditions

The ambient parameters of the laboratory during testing were as follows:

Ambient Parameters	Value
Temperature	21.9°C
Relative Humidity	45%
Atmospheric Pressure	1002mb

## 13. Summary

The following EMC tests were performed and the results are shown below:

Test Description	Requirements	Test Method	S/N	Results
6dB Bandwidth	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	860310067	Conforms
99% Bandwidth	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	860310067	Conforms
Output Power	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	860310067	Conforms
Power Spectral Density	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	860310067	Conforms
Low Band Edge	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	860310067	Conforms
Duty Cycle Correction Factor	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	4010231D	---
EIRP	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	40100068D, 4010050D, 4010053D	Conforms
Spurious Radiated Emissions	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	40100068D, 4010050D, 4010053D	Conforms
High Band Edge	FCC 15.247 ISED RSS-247	ANSI C63.10:2013	4010053D	Conforms

## 14. Sample Calculations

For Powerline Conducted Emissions:

The resultant voltage level (VL) is a summation in decibels (dB) of the receiver meter reading (MTR) and the cable loss factor (CF).

$$\text{Formula 1: } VL \text{ (dB}\mu\text{V)} = MTR \text{ (dB}\mu\text{V)} + CF \text{ (dB)}.$$

For Radiated Emissions:

The resultant field strength (FS) is a summation in decibels (dB) of the receiver meter reading (MTR), the antenna correction factor (AF), and the cable loss factor (CF). If an external preamplifier is used, the total is reduced by its gain (-PA). If a distance correction (DC) is required, it is added to the total.

Formula 1:  $FS (\text{dB}\mu\text{V}/\text{m}) = MTR (\text{dB}\mu\text{V}) + AF (\text{dB}/\text{m}) + CF (\text{dB}) + (- PA (\text{dB})) + DC (\text{dB})$

To convert the Field Strength  $\text{dB}\mu\text{V}/\text{m}$  term to  $\mu\text{V}/\text{m}$ , the  $\text{dB}\mu\text{V}/\text{m}$  is first divided by 20. The Base 10 AntiLog is taken of this quotient. The result is the Field Strength value in  $\mu\text{V}/\text{m}$  terms.

Formula 2:  $FS (\mu\text{V}/\text{m}) = \text{AntiLog} [(FS (\text{dB}\mu\text{V}/\text{m}))/20]$

## 15. Statement of Conformity

The Milwaukee Electric Tool Corporation One Key 7.25in Circular Saw (Model No. 2835-20) did fully conform to the selected requirements of FCC "Code of Federal Regulations" Title 47 Part 15, Subpart C, Section 15.247 and Innovation, Science, and Economic Development Canada, RSS-247.

## 16. Certification

Elite Electronic Engineering Incorporated certifies that the information contained in this report was obtained under conditions which meet or exceed those specified in the FCC "Code of Federal Regulations" Title 47 Part 15, Subpart C, Section 15.247 and Innovation, Science, and Economic Development Canada, RSS-247 test specifications. The data presented in this test report pertains to the EUTs as received by the customer on the test date specified. Any electrical or mechanical modifications made to the EUTs subsequent to the specified test date will serve to invalidate the data and void this certification.

## 17. Photographs of EUT

## 18. Equipment List

Eq ID	Equipment Description	Manufacturer	Model No.	Serial No.	Frequency Range	Cal Date	Due Date
APW10	PREAMPLIFIER	PLANAR ELECTRONICS	PE2-35-120-5R0-10-12-SFF	PL11685/1241	1GHZ-20GHZ	3/20/2024	3/20/2025

Test Information	
Manufacturer	Milwaukee Electric Tool Corporation
Product	One Key 7.25in Circular Saw
Model No.	2835-20
Serial No.	860310067
Mode	2402MHz, 2440MHz, 2480MHz

Test Setup Details	
Setup Format	Tabletop
Type of Test Site	EMC Bench
Note	None

Measurement Uncertainty	
Measurement Type	Expanded Measurement Uncertainty
Occupied Channel Bandwidth	± 224kHz
Power Spectral Density	± 0.372Hz
RF Output Power, Conducted	± 0.349 dB
Unwanted Emissions, Conducted	± 1.39 dB
All Emissions Radiated Below 1GHz	± 2.629 dB
All Emissions Radiated Above 1GHz	± 2.710 dB
Temperature	± 0.165°C
Humidity	± 1.7% RH
DC and Low Frequency Voltages	± 0.115 Volts
Time	± 0.05%

Requirements
6dB Bandwidth (DTS Bandwidth):  Per FCC 15.247, Section (a)(2), and ISED RSS-247, Section 5.2(a), the minimum 6dB bandwidth shall be at least 500kHz for all systems using digital modulation techniques.
99% Bandwidth:  RSS-Gen requires the measurement of the 99% bandwidth (Occupied Bandwidth).  If measuring the maximum conducted (average) output power for FCC 15.247, the 99% bandwidth is used as the reference for power integration.
Peak Conducted Output Power  Per FCC 15.247, Section (b)(3) and ISED RSS-247, Section 5.4(d), for systems using digital modulation, the maximum peak conducted output power shall not exceed 1 watt.
Peak Power Spectral Density:  Per FCC 15.247, Section (e), and ISED RSS-247, Section 5.2(b), for digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission. If peak conducted output power was measured, the same method must be used to measure the power spectral density.
Low Band Edge:  Per FCC 15.247, Section (d) and ISED RSS-247, Section 5.5, in any 100 kHz bandwidth outside the frequency band in which the digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. Attenuation below the general limits specified in FCC 15.209, Section (a) and ISED RSS-Gen is not required.
Duty Cycle Correction Factor:  Per ANSI C63.10, Section 11.6, duty cycle refers to the fraction of time over which the transmitter is ON and is transmitting at its maximum power control level.  When continuous transmission cannot be achieved, measurement of the duty cycle can be used to measure the average power.

Procedures
6dB Bandwidth (DTS Bandwidth):
C63.10-2013 Section 11.8 Option 1:  a) The following settings were employed on the EMI Test Receiver:  1. Center Frequency = Transmit Frequency of the EUT 2. Frequency Span = 2 x Occupied Channel Bandwidth 3. RBW = 100kHz 4. VBW = 3 x RBW 5. Detector Mode = Max Peak 6. Trace Mode = Max Hold

- b) Allow the trace to stabilize.
- c) Set the spectrum analyzer marker to the highest level of the displayed trace (this is the reference value).
- d) Determine the 6dB down amplitude.
- e) Place two markers, one at the lowest frequency and the other at the highest frequency of the envelope trace, such that each marker is at or slightly below the 6dB down amplitude determined in step d). If a marker is below this 6dB down amplitude value, then it shall be as close as possible to this value. The occupied bandwidth is the frequency difference between the two markers.

99% Bandwidth:

C63.10-2013 section 6.9.3:

- a) The following settings were employed on the EMI Test Receiver:

1. Center Frequency =	Transmit Frequency of the EUT
2. Frequency Span =	Between 1.5 and 5 times the OBW
3. RBW =	Between 1% to 5% of the OBW
4. VBW =	Approximately 3 x RBW
5. Detector Mode =	Max Peak
6. Trace Mode =	Max Hold

- b) Allow the trace to stabilize.
- c) Use the 99% power bandwidth function of the EMI receiver.

Peak Conducted Output Power:

C63.10-2013 section 11.9.1.1:

- a) The following settings were employed on the EMI Test Receiver:

1. Center Frequency =	Transmit Frequency of the EUT
2. RBW =	$\geq$ DTS Bandwidth
3. VBW =	$\geq 3 \times$ RBW
4. Span =	$\geq 3 \times$ RBW
5. Sweep Time =	Auto couple
6. Detector Mode =	Max Peak
7. Trace Mode =	Max Hold

- b) Allow the trace to stabilize.
- c) Use the peak marker function to determine the peak amplitude level.

Peak Power Spectral Density:

C63.10-20013 section 11.10.2:

- a) The following settings were employed on the EMI Test Receiver:

1. Center Frequency =	Transmit Frequency of the EUT
2. Frequency Span =	At least 1.5 times the OBW
3. RBW =	$3\text{kHz} \leq$ RBW $\leq 100\text{kHz}$
4. VBW =	$\geq 3 \times$ RBW
5. Detector Mode =	Max Peak
6. Sweep Time =	Auto Couple
7. Trace Mode =	Max Hold

- b) Allow the trace to stabilize.
- c) Use the peak marker function to determine the maximum amplitude level within the RBW.
- d) If measured value exceeds requirement, then reduce RBW (but no less than 3kHz) and repeat.

Low Band Edge:

C63.10-2013 section 11.11:

- a) Reference Level Measurement

- 1. Start Frequency = 2400MHz
- 2. Stop Frequency = 2483.5MHz
- 3. RBW = 100kHz
- 4. VBW =  $\geq 3 \times$  RBW
- 5. Detector Mode = Max Peak
- 6. Trace Mode = Max Hold
- 7. Sweep Time = Auto

- b) Allow the trace to stabilize and use the peak marker function to determine the maximum level.

- c) Emission Level Measurement

- 1. Start Frequency = 2310MHz
- 2. Stop Frequency = 2400MHz
- 3. RBW = 100kHz
- 4. VBW =  $\geq 3 \times$  RBW
- 5. Detector Mode = Max Peak
- 6. Trace Mode = Max Hold
- 7. Sweep Time = Auto

- d) Allow the trace to stabilize and use the peak marker function to determine the maximum level.

- e) The two sweeps were combined and plotted.

- f) Ensure that the amplitude of all unwanted emissions are attenuated by at least 20dB.

## Minimum Emission Bandwidth 6 dB (2402 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(a), KDB 558074 D01 DTS Meas Guidance v05r02 and ANSI C63.10-2013 11.8.1

DUT Frequency (MHz)	Bandwidth (MHz)	Limit Min (MHz)	Limit Max (MHz)	Band Edge Left (MHz)	Band Edge Right (MHz)
2402.000000	0.804020	0.500000	---	2401.572864	2402.376884

DUT Frequency (MHz)	Max Level (dBm)	Result
2402.000000	4.5	PASS

## Minimum Emission Bandwidth 6 dB (2440 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(a), KDB 558074 D01 DTS Meas Guidance v05r02 and ANSI C63.10-2013 11.8.1

DUT Frequency (MHz)	Bandwidth (MHz)	Limit Min (MHz)	Limit Max (MHz)	Band Edge Left (MHz)	Band Edge Right (MHz)
2440.000000	0.804020	0.500000	---	2439.572864	2440.376884

DUT Frequency (MHz)	Max Level (dBm)	Result
2440.000000	4.4	PASS

6 dB Bandwidth

## Minimum Emission Bandwidth 6 dB (2480 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(a), KDB 558074 D01 DTS Meas Guidance v05r02 and ANSI C63.10-2013 11.8.1

DUT Frequency (MHz)	Bandwidth (MHz)	Limit Min (MHz)	Limit Max (MHz)	Band Edge Left (MHz)	Band Edge Right (MHz)
2480.000000	0.804020	0.500000	---	2479.572864	2480.376884

DUT Frequency (MHz)	Max Level (dBm)	Result
2480.000000	4.0	PASS

6 dB Bandwidth

## Peak output power (Sweep) (2402 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(b), KDB 558074 D01 DTS Meas Guidance v05r02 and ANSI C63.10-2013 11.9.1.1

DUT Frequency (MHz)	Peak Power (dBm)	Limit Max (dBm)	Result
2402.000000	6.1	30.0	PASS

## Peak output power (Sweep) (2440 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(b), KDB 558074 D01 DTS Meas Guidance v05r02 and ANSI C63.10-2013 11.9.1.1

DUT Frequency (MHz)	Peak Power (dBm)	Limit Max (dBm)	Result
2440.000000	5.7	30.0	PASS

## Peak output power (Sweep) (2480 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(b), KDB 558074 D01 DTS Meas Guidance v05r02 and ANSI C63.10-2013 11.9.1.1

DUT Frequency (MHz)	Peak Power (dBm)	Limit Max (dBm)	Result
2480.000000	5.8	30.0	PASS

## Peak Power Spectral Density (2402 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(a),(e), KDB 558074 D01 DTS Meas Guidance v05r02 F and ANSI C63.10-2013

DUT Frequency (MHz)	Frequency (MHz)	PSD (dBm)	Limit Max (dBm)	Result
2402.000000	2401.884422	-3.605	8.0	PASS

## Peak Power Spectral Density (2440 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(a),(e), KDB 558074 D01 DTS Meas Guidance v05r02 F and ANSI C63.10-2013

DUT Frequency (MHz)	Frequency (MHz)	PSD (dBm)	Limit Max (dBm)	Result
2440.00000	2439.884422	-3.879	8.0	PASS

## Peak Power Spectral Density (2480 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(a),(e), KDB 558074 D01 DTS Meas Guidance v05r02 F and ANSI C63.10-2013

DUT Frequency (MHz)	Frequency (MHz)	PSD (dBm)	Limit Max (dBm)	Result
2480.000000	2479.879397	-3.778	8.0	PASS

## Occupied Channel Bandwidth 99% (2402 MHz; 6.000 dBm; 5 MHz)

Test according to FCC title 47 part 15 §15.247(a), KDB 558074 D01 DTS Meas Guidance v05r02 and ANSI C63.10-2013 11.8.1

DUT Frequency (MHz)	Bandwidth (MHz)	Limit Min (MHz)	Limit Max (MHz)	Band Edge Left (MHz)	Band Edge Right (MHz)

## 21. Radiated Emissions Tests

EUT Information	
Manufacturer	Milwaukee Electric Tool Corporation
Product	One Key 7.25in Circular Saw
Model No.	2835-20
Serial No.	40100068D, 4010050D, 4010053D, 4010231D
Mode	2402MHz, 2440MHz, 2480MHz, Production Firmware

Test Setup Details	
Setup Format	Tabletop
Type of Test Site	Semi-Anechoic Chamber
Test Site Used	Room 29
Type of Antennas Used	Below 1GHz: Bilog (or equivalent) 1 – 18GHz: Double-Ridged Waveguide (or equivalent) Above 18GHz: Horn (or equivalent)
Notes	N/A

Measurement Uncertainty	
Measurement Type	Expanded Measurement Uncertainty
Radiated disturbance (electric field strength on an open area test site or alternative test site) (30 MHz – 1000 MHz)	4.3
Radiated disturbance (electric field strength on an open area test site or alternative test site) (1 GHz – 6 GHz)	3.1
Radiated disturbance (electric field strength on an open area test site or alternative test site) (6 GHz – 18 GHz)	3.2
Radiated disturbance (electric field strength on an open area test site or alternative test site) (18 GHz – 26.5 GHz)	3.3
Radiated disturbance (electric field strength on an open area test site or alternative test site) (26.5 GHz – 40 GHz)	3.4

## Requirements

### Peak EIRP:

Per FCC 15.247, Section (b)(3) and ISED RSS-247, Section 5.4(d), for systems using digital modulation, the maximum peak conducted output power shall not exceed 1 watt.

Per FCC 15.247, Section (b)(4), and ISED RSS-247, Section 5.4(d), the conducted output power limit is based on the use of antennas with directional gains that do not exceed 6dBi. If transmitting antennas of directional gain greater than 6dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values, by the amount in dB that the directional gain of the antenna exceeds 6dBi.

### Radiated Emissions in Non-Restricted Bands:

Per FCC 15.247, Section (d), and ISED RSS-247, Section 5.5, in any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated emissions measurement. Attenuation below the general limits specified in §15.209(a) is not required.

### Radiated Emissions in Restricted Bands:

Per 15.247, Section (d), radiated emissions which fall in the restricted bands, as defined in FCC 15.205, Section (a), must comply with the radiated emission limits specified in FCC 15.209, Section (a).

Per ISED RSS-247, Section 3.3, radiated emissions which fall in the restricted bands, as defined in ISED RSS-Gen, Section 8.10, must comply with the radiated emission limits specified in RSS-Gen, Section 8.9.

### High Band Edge:

Per 15.247, Section (d), radiated emissions which fall in the restricted band beginning at 2483.5MHz, as defined in FCC 15.205, Section (a), must comply with the radiated emission limits specified in FCC 15.209, Section (a).

Per ISED RSS-247, Section 3.3, radiated emissions which fall in the restricted band beginning at 2483.5MHz, as defined in ISED RSS-Gen, Section 8.10, must comply with the radiated emission limits specified in RSS-Gen, Section 8.9.

## Procedures

### Peak EIRP:

#### C63.10 Annex G and Section 11.9.1.1:

The EUT was placed on a 1.5 meter high non-conductive stand and set to transmit. A double ridged waveguide antenna was placed at a test distance of 3 meters from the EUT.

- The following settings were employed on the EMI Test Receiver:

1) Center Frequency =	Transmit frequency of EUT
2) Span =	$\geq 3 \times RBW$
3) RBW =	$\geq DTS$ Bandwidth
4) VBW =	$\geq 3 \times RBW$
5) Number of points in sweep =	$\geq (2 \times \text{span} / RBW)$
6) Sweep time =	Auto
7) Detector =	Peak

8) Trace =	Max hold
------------	----------

- b) Allow trace to stabilize and use peak marker function to determine the peak amplitude level.
- c) Select if you used free space propagation loss to determine EIRP: The equivalent power was determined using equation G.1 in C63.10 to convert field intensity levels measured at 3 meters into EIRP readings.

#### Radiated Emissions in Non-Restricted Bands:

##### C63.10-2013 Section 11.11

Radiated measurements were performed in a 32ft. x 20ft. x 14ft. high shielded enclosure. The shielded enclosure prevents emissions from other sources, such as radio and TV stations from interfering with the measurements. All powerlines and signal lines entering the enclosure pass through filters on the enclosure wall. The powerline filters prevent extraneous signals from entering the enclosure on these leads.

Preliminary radiated emissions tests were performed to determine the emission characteristics of the EUT. For the preliminary test, a broadband measuring antenna was positioned at a 3 meter distance from the EUT. The entire frequency range from 1GHz to 25GHz was investigated using a peak detector function.

The final radiated emission tests were then manually performed over the frequency range of 1GHz to 25GHz.

- 1) The field strength of the fundamental was measured using a double ridged waveguide antenna. The waveguide antenna was positioned at a 3 meter distance from the EUT. The EUT was placed on a 1.5 meter high non-conductive stand and set to transmit. A peak detector with a resolution bandwidth of 100kHz was used on the spectrum analyzer.
- 2) The field strengths of all of the harmonics not in the restricted band were then measured using a double-ridged waveguide antenna. The waveguide antenna was positioned at a 3 meter distance from the EUT. The EUT was placed on a 1.5 meter high non-conductive stand and set to transmit. A peak detector with a resolution bandwidth of 100kHz was used on the spectrum analyzer.
- 3) To ensure that maximum or worst case emission levels at the fundamental and harmonics were measured, the following steps were taken when measuring the fundamental emissions and the spurious emissions:
  - a) The EUT was rotated so that all of its sides were exposed to the receiving antenna.
  - b) Since the measuring antenna is linearly polarized, both horizontal and vertical field components were measured.
  - c) The measuring antenna was raised and lowered for each antenna polarization to maximize the readings.
  - d) In instances where it was necessary to use a shortened cable between the measuring antenna and the spectrum analyzer, the measuring antenna was not raised or lowered to ensure maximized readings. Instead, the EUT was rotated through all axis to ensure the maximum readings were recorded for the EUT.
- 4) All harmonics not in the restricted bands must be at least 20dB below levels measured at the fundamental. However, attenuation below the general limits specified in §15.209(a) is not required.

#### Radiated Emissions in Restricted Bands:

##### C63.10-2013 Section 11.12

- 1) The field strengths of all emissions below 1 GHz were measured using a bi-log antenna. The bi-log antenna was positioned at a 3 meter distance from the EUT. The EUT was placed on an 80 cm

high non-conductive stand and set to transmit. A peak detector with a resolution bandwidth of 100 kHz was used on the spectrum analyzer.

- 2) The field strengths of all emissions above 1 GHz were measured using a double-ridged waveguide antenna. The waveguide antenna was positioned at a 3 meter distance from the EUT. The EUT was placed on a 1.5 meter high non-conductive stand and set to transmit. A peak detector with a resolution bandwidth of 1 MHz was used on the spectrum analyzer.
- 3) To ensure that maximum or worst case emission levels were measured, the following steps were taken when taking all measurements:
  - a) The EUT was rotated so that all of its sides were exposed to the receiving antenna.
  - b) Since the measuring antenna is linearly polarized, both horizontal and vertical field components were measured.
  - c) The measuring antenna was raised and lowered for each antenna polarization to maximize the readings.
  - d) In instances where it was necessary to use a shortened cable between the measuring antenna and the spectrum analyzer, the measuring antenna was not raised or lowered to ensure maximized readings. Instead, the EUT was rotated through all axis to ensure the maximum readings were recorded for the EUT.
- 4) For all radiated emissions measurements below 1GHz, if the peak reading is below the limits listed in 15.209(a), no further measurements are required. If, however, the peak readings exceed the limits listed in 15.209(a), then the emissions are remeasured using a quasi-peak detector.
- 5) For all radiated emissions measurements above 1GHz, the peak readings must comply with the 15.35(b) limits. 15.35(b) states that when average radiated emissions measurements are specified, there also is a limit on the peak level of the radiated emissions. The limit on the peak radio frequency emissions is 20dB above the maximum permitted average emission limit applicable to the equipment under test. Therefore, all peak readings above 1GHz must be no greater than 20dB above the limits specified in 15.209(a).
- 6) Next, for all radiated emissions measurements above 1GHz, the resolution bandwidth was set to 1MHz. The analyzer was set to linear mode with a 10Hz video bandwidth in order to simulate an average detector. An average reading was taken. The duty cycle correction [(DCCF) =  $20 \log (1/D)$ ] factor was added to the measurement results.

#### High Band Edge:

##### C63.10-2013 section 6.10.5:

- 1) The EUT was set to transmit continuously at the channel closest to the high band-edge.
- 2) The waveguide antenna was positioned at a 3 meter distance from the EUT. The EUT was placed on a 1.5 meter high non-conductive stand and set to transmit. A peak detector with a resolution bandwidth of 1 MHz was used on the spectrum analyzer.
- 3) To ensure that maximum or worst case emission levels were measured, the following steps were taken when taking all measurements:
  - a) The EUT was rotated so that all of its sides were exposed to the receiving antenna.
  - b) Since the measuring antenna is linearly polarized, both horizontal and vertical field components were measured.
  - c) The measuring antenna was raised and lowered for each antenna polarization to maximize the readings.
- 4) The peak readings must comply with the 15.35(b) limits. 15.35(b) states that when average radiated emissions measurements are specified, there also is a limit on the peak level of the radiated

emissions. The limit on the peak radio frequency emissions is 20 dB above the maximum permitted average emission limit applicable to the equipment under test. Therefore, all peak readings above 1 GHz must be no greater than 20 dB above the limits specified in 15.209(a).

- 5) Next, the resolution bandwidth was set to 1MHz. The analyzer was set to linear mode with a 10Hz video bandwidth in order to simulate an average detector. An average reading was taken. The duty cycle correction [(DCCF) =  $20 \log (1/D)$ ] factor was added to the measurement results.

## ELECTRICAL

Valid To: June 30, 2025

Certificate Number: 1786.01

In recognition of the successful completion of the A2LA Accreditation Program evaluation process, accreditation is granted to this laboratory to perform the following automotive electromagnetic compatibility and other electrical tests:

Test Technology:*Transient Immunity**(Max Voltage 60V/Max current 100A)*Test Method(s)<sup>1</sup>:

ISO 7637-2 (including emissions); ISO 7637-3;  
ISO 16750-2:2012, Sections 4.6.3 and 4.6.4;  
CS-11979, Section 6.4; CS.00054, Section 5.9;  
EMC-CS-2009.1 (CI220); FMC1278 (CI220, CI221, CI222);  
GMW 3097, Section 3.5; SAE J1113-11; SAE J1113-12;  
ECE Regulation 10.06 Annex 10

*Electrostatic Discharge (ESD)**(Up to +/-25kV)*

ISO 10605 (2001, 2008);

CS-11979 Section 7.0; CS.00054, Section 5.10;

EMC-CS-2009.1 (CI 280); FMC1278 (CI280); SAE J1113-13;

GMW 3097 Section 3.6

*Conducted Emissions*

CISPR 25 (2002, 2008), Sections 6.2 and 6.3;

CISPR 25 (2016), Sections 6.3 and 6.4;

CS-11979, Section 5.1; CS.00054, Sections 5.6.1 and 5.6.2;

GMW 3097, Section 3.3.2;

EMC-CS-2009.1 (CE 420); FMC1278 (CE420, CE421, CE 430, CE440)

(A2LA Cert. No. 1786.01) 08/15/2023

Page 1 of 9

Test Technology: Test Method(s)<sup>1</sup>:

Electrical Measurements and Simulation

AC Voltage / Current  
 (1mV to 5kV) 60 Hz  
 (0.1V to 250V) up to 500 MHz  
 (1µA to 150A) 60 Hz

FAA AC 150/5345-10H;  
 FAA AC 150/5345-43J;  
 FAA AC 150/5345-44K;  
 FAA AC 150/5345-46E;  
 FAA AC 150/5345-47C;  
 FAA EB 67D

DC Voltage / Current  
 (1mV to 15 kV) / (1µA to 10A)

Power Factor / Efficiency / Crest Factor  
 (Power to 30kW)

Resistance  
 (1mΩ to 4000MΩ)

Surge  
 (Up to 10 kV / 5 kA) (Combination Wave and Ring Wave)

On the following products and materials:

Telecommunications Terminal Equipment (TTE), Radio Equipment, Network Equipment, Information Technology Equipment (ITE), Automotive Electronic Equipment, Automotive Hybrid Electronic Devices, Maritime Navigation and Radio Communication Equipment and Systems, Vehicles, Boats and Internal Combustion Engine Driven Devices, Automotive, Aviation, and General Lighting Products, Medical Electrical Equipment, Motors, Industrial, Scientific and Medical (ISM) Radio-Frequency Equipment, Household Appliances, Electric Tools, Low-voltage Switchgear and Control gear, Programmable Controllers, Electrical Equipment for Measurement, Control and Laboratory Use, Base Materials, Power and Data Transmission Cables and Connectors

<sup>1</sup> When the date, edition, version, etc. is not identified in the scope of accreditation, laboratories may use the version that immediately precedes the current version for a period of one year from the date of publication of the standard measurement method, per part C., Section 1 of A2LA R101 - *General Requirements- Accreditation of ISO-IEC 17025 Laboratories*.

Testing Activities Performed in Support of FCC Certification in Accordance with 47 Code of Federal Regulations and FCC KDB 974614, Appendix A, Table A.1<sup>2</sup>

Rule Subpart/Technology	Test Method	Maximum Frequency (MHz)
<u>Unintentional Radiators</u> Part 15B	ANSI C63.4:2014	40000
<u>Industrial, Scientific, and Medical Equipment</u> Part 18	FCC MP-5 (February 1986)	40000
<u>Intentional Radiators</u> Part 15C	ANSI C63.10:2013	40000

(A2LA Cert. No. 1786.01) 08/15/2023

<u>Broadcast Radio Services</u>		
Parts 73 and 74 (below 3 GHz)	ANSI/TIA-603-E; TIA-102.CAAA-E; ANSI C63.26:2015	40000
<u>Signal Boosters</u>		
Part 20 (Wideband Consumer Signal Boosters, Provider-specific signal boosters, and Industrial Signal Boosters) Section 90.219	ANSI C63.26:2015	40000

<sup>2</sup> Accreditation does not imply acceptance to the FCC equipment authorization program. Please see the FCC website (<https://apps.fcc.gov/oetcf/eas/>) for a listing of FCC approved laboratories.

## Accredited Laboratory

A2LA has accredited

### ELITE ELECTRONIC ENGINEERING INC.

Downers Grove, IL

for technical competence in the field of

#### Electrical Testing

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 15<sup>th</sup> day of August 2023.

Mr. Trace McInturff, Vice President, Accreditation Services  
For the Accreditation Council  
Certificate Number 1786.01  
Valid to June 30, 2025

For the tests to which this accreditation applies, please refer to the laboratory's Electrical Scope of Accreditation.
