Hi Paivi

Almost there. However, the following must be addressed:

1 The statement in the manual "This device complies with part 15 of the FCC rules. Operation is subject to the condition that this device does not cause harmful interference." does not meet the requirements of 15.19 for computer peripherals. The label or the manual if the device is too small, must bear the following statement verbatim "This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation." Please provide a manual with this statement contained in it.

2 Your device has an antenna terminal and is used for Part 24, this means the FCC wants to see min and max power levels tested for conducted antenna terminal data. Please specify if the device is 'autoranging' power levels. If it is, please provide low power level antenna conducted data.

3 The new label does not indicate which FCC route was taken for the computer peripheral part. If DoC was done, then the correct FCC DoC logo must appear on the label. If the device is certified to Part 15 then a second application with all pertinent Part 15 information in coincidence with the part 24 applicaion must be provided. If the DoC route was taken then Part 15 testing must be performed by an accredited laboratory and the device must be marked with the appropriate DoC label/logo. Please provide a correct label showing either the Part 15 DoC information. See CFR47 Parts 2.948d, 2.906, 2.1072, 2.1077, and 15.19b.

4 The updated users guide has not been uploaded as mentioned in the correspondence.

Thanks
Dennis
