RE: FCC ID: P5680-5196-00

I have a few comments on this Application.

- 1 Please provide the manual describing the alternate belt-holder (P/N80-5237).
- 2 Your report states that the device was "evaluated at maximum power", however, this does not fully address the process used to determine maximum power, worse case mode or other parameters. Please provide a discussion of how the EUT was operated/controlled during the test to assure the testing of all appropriate modes, maximum power, and any other parameters. Supplement C Appendix B part I 2.
- 3 Please provide a clear description of the coarse resolution, surface or area scan procedures used to search for all possible peak SAR locations within the phantom. Please provide a description of the extrapolation procedures used to estimate the SAR value of points close to the phantom surface that are not measurable. (Supplement C Appendix B part II 7& 8.) Please address all descriptive requirements in these two sections of Supplement C appendix B.
- 4 Please provide a summary of the Computational resources and other items required by Supplement C Appendix B III. Please remember that this is not the data, but a summary of the procedures and computational parameters used.

A handwritten signature in black ink that reads "Dennis Ward".

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
