RE: Telaxis communications Corporation

FCC ID: P57-FL60-1250

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) The external photographs, internal photographs are listed as confidential in the exhibits. Please note that these exhibit may not normally be held confidential.
- 2) Page 33 of 55 shows ( $G = 1$  for EIRP). However the equation used the actual antenna gain since it was known. Therefore this note is misleading.
- 3) Please provide an attestation that the device will meet the requirements of 15.255(h). For instance, an attestation that the device will not be equipped with external phase-locking input that permit beam-forming arrays to be realized.
- 4) For powerline AC conducted emissions, the justification is given that the device is powered from 48 VDC. However, please explain how the intended installations will meet with the requirements of 15.207(d).
- 5) FYI, the FCC prefers measurements to be made at distances closer than 3 meter for MMW devices. Please see page 6 of attached document.

Timothy R. Johnson  
Examining Engineer
