

KDB 447498 D01 Mobile RF Exposure

SAR test positions and requirements for specific host platforms and exposure conditions

- Extremity and body SAR evaluation considerations

Hand SAR is required for hand-held and hand-operated devices with output power $1000 > [f(\text{GHz})]^{-0.5}$ mW that are designed with the hand operating closer than 5 cm from the antenna during normal use.

Measurement data :

hand-operated devices output power limit : $1000 > [f(\text{GHz})]^{-0.5}$ mW : 1045mW (f=0.915)

Output power of this product's output power : 818.46mW

This product is used more than 5Cm away from the antenna
