Subject: Declaration of Antenna used in MW BPA-D10

The swivel antenna used in the Bluetooth Protocol Analyser (MW BPA-D10) is connected to the main PCB via an SMA connector. There is an opening on the top housing that exposes the rotating arm of the swivel antenna, so that user can lift the rotating arm vertical for better reception.

The antenna cannot be removed or replaced by user without taking the whole unit apart, and removing the printed circuits boards from the housing. In the course of doing that, it will void the service warranty provided by manufacturer, and might damage the unit if not careful.

The swivel antenna used is an omni-directional antenna, manufactured by GigaAnt AB. The antenna carries the model number 6069019 and has gain of 1.7dBi.

A handwritten signature in black ink, appearing to read "CHIA HANG POH".

Regards,

Chia Hang Poh.
