Correspondence Number	Memo
P7RT24APDUAL-1	<p>1) The test report states that no modifications were performed on the device under test. However, there is a modification letter from the manufacturer stating that modifications were performed. Which is correct? The test report has been revised to show that there was a modification during the testing. The test report will now reflect what the modification letter states. 2) According to the expository statement, the device can operate on one of 24 channels. In the test report, only one channel was tested. Please explain. Please see the explanation on how the transmitter works. This will be uploaded in the exhibits. To summarize, the transmitter only operates on 1 frequency (418 MHz), but uses different recognition codes to tell the receiver what channel to activate.</p>
