

## Appendix B: Measurement Data:

The attached updated Appendix reflects the re-measured emissions for the 2<sup>nd</sup> harmonic (638 MHz) of the EUT at 3 meters. The EUT was re-measured using a production battery clip, as illustrated in the original submission, but which was only mocked up in the test sample used in the original measurements submitted in February and March. The readings discrepancies were verified by comparative measurements, and all other spurious emissions were found to be reduced somewhat as well.
