

The AWE 2.0 wireless earpiece, which is designed to work between ears of a person and a mobile phone in a distance of about 3m. The base set working without a battery can be plugged in most of types of mobile phones such as GSM900, DCS 1800 or PHS 1800 as one end of a voice transceiver. The AWE 2.0 earpiece powered by Ni-Mh 3.6V battery hooks to a person's right or left ear as the other end of a transceiver. When a mobile phone with AWE 2.0 base set rings, just press the button one time on the AWE 2.0 earpiece to get the call. The AWE 2.0 earpiece can be charged from the battery of a mobile phone through a bridge wire for longer use. The pair of transceiver won't radiate after power-on when in charge mode.
