

American Telecommunications Certification Body Inc.
6731 Whittier Ave, McLean, VA 22101

RE: P9R-10083132

Attention: Brian Dettling

During the review of this device, the following items need to be clarified. Please be aware that there may be additional questions based upon the responses to these items.

1. The power output data still does not completely match up – in the test report, the power measurement is shown to be -13.5 dBm, which equates to 0.0447 milliWatts. In previous responses, it has been stated that the output power should be 0.0447 Watts, or 44.7 mW. Note that the peak power spectral density measurements support the -13.5 dBm, 0.0447 mW, result.

Best Regards,

Michael Mobley

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to the correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
