### 3 TEST RESULTS

#### 3.1 RADIATED PEAK TRANSMIT POWER

**Clause:** 15.319 (c)

**Test procedure:** ANSI C63.17 section 6.1.2

**Technical requirements/Limits:**

The peak transmit power shall not exceed 100  $\mu$ W multiplied by the square root of the emission bandwidth in hertz measured at 26dBc.

The measured emissions bandwidth is 1.5 MHz max

$$\text{Limit} = 100\mu\text{W} * \sqrt{(\text{BW in Hz})} = 0.122\text{W} = 20.8 \text{ dBm}$$

and Radiated limit  $\leq 118 \text{ dB}\mu\text{V/m}$  at 3m by radiated measurement derived from Friis formula as follows  $P = (E*d)^2/30G$ , where  $P = 0.122 \text{ W} = 20.8 \text{ dBm}$

This assumes a  $G = \text{Numeric gain of TX antenna} = 1.585$  (2.0 dBi) worst-case across band  
 $d = 3 \text{ m}$

Notes: The calculated limit of 118 dB $\mu$ V/m assumes free space conditions. This device was measured on a typical test site (OATS) with a reference ground plane as described in ANSI C63.4. This maximum value was obtained with the EUT set up at a height of 80cm. Placing the EUT at a height of 100cm reduces the maximum amplitude measured by about 3-4dB.

**Test Conditions:**

Power output measurements were performed on an Open Area Test Site at a distance of 3meter. The antenna for this device is integral.

SA Settings:

RBW  $\geq$  Emission BW (or increased until no more than 0.5 dB change in power), VBW  $\geq 3 \times$  RBW

Span = zero, centered on channel center, Sweep: fast enough to resolve transmit pulse

Detection: Peak

## TRANSMITTER SPURIOUS EMISSIONS

**Clause:** 15.319 (g) and 15.323(d)

**Test procedure:** ANSI C63.17 section 6.1.1

### Technical requirements/Limits:

15.319(g) Notwithstanding other technical requirements specified in this subpart, attenuation of emissions below the general emission limits in Section 15.209 is not required.

15.323(d) Emissions outside the sub-band shall be attenuated below a reference power of 112 milliwatts as follows: 30 dB between the sub-band and 1.25 MHz above or below the sub-band; 50 dB between 1.25 and 2.5 MHz above or below the sub-band; and 60 dB at 2.5 MHz or greater above or below the subband. Compliance with the emission limits is based on the use of measurement instrumentation employing peak detector function with an instrument resolution bandwidth approximately equal to 1.0 percent of the emission bandwidth of the device under measurement.

### Test Conditions:

Lowest and Highest channel only. Radiated on an Open Area Test Site at a distance of 3meter.
