Re: FCC ID: PBWFH24R16

To Whom It May Concern:

This will serve as a Class II Permissive Change request for the above mentioned FCC Identifier.

The manufacturer has upgraded the base software to support 2-pod operation - the original device supported only 1-pod operation. The base is now capable of 2 TX time slots per frame instead of one.

We have performed radiated emissions testing and antenna conducted testing and there is no degradation from the original test data. The data in the test report shows that it still continues to meet the FCC requirements for this class of equipment.

Should you have any questions or require any further information, please advise.
