

## MPE Calculations

Systems operating under the provision of 47 CFR 1.1307(b)(1) shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the FCC guidelines.

The EUT will only be used with a separation of 20 centimeters or greater between the antenna and the body of the user or nearby persons and can therefore be considered a mobile transmitter per 47 CFR 2.1091(b). The MPE calculation for this exposure is shown below.

**Using the Antennas with highest output power:** Ethertronics Shanghai Universe Communication Electron Co., Ltd Antennas

**The peak radiated output power (EIRP) is calculated as follows:**

| <i>Antenna</i>              | <i>Frequency<br/>(GHz)</i> | <i>Power input to the<br/>antenna (P)<br/>(dBm)</i> | <i>Power gain of the<br/>antenna (G)<br/>(dBi)</i> | <i>EIRP<br/>(P+G)<br/>(dBm)</i> | <i>EIRP<br/><math>\text{Log}^{-1}(\text{dBm}/10)</math><br/>(mW)</i> |
|-----------------------------|----------------------------|---|--|---------------------------------|--|
| Shanghai Universe (Chain A) | 2.4                        | 16.74   | 3.24   | 19.98                           | 99.54  |
| Shanghai Universe (Chain A) | 5                          | 16.94   | 4.97   | 21.91                           | 155.24   |
| Shanghai Universe (Chain B) | 2.4                        | 16.80   | 3.24   | 20.04                           | 100.93   |
| Shanghai Universe (Chain B) | 5                          | 16.94   | 4.97   | 21.91                           | 155.24   |

$\text{EIRP} = P + G$

Where

P = Power input to the antenna (mW).

G = Power gain of the antenna (dBi)

**The numeric gain (G) of the antenna with a gain specified in dB is determined by:**

| <i>Antenna</i>              | <i>Frequency<br/>(GHz)</i> | <i>Antenna Gain<br/>(G)<br/>(dBi)</i> | <i>Numeric Antenna Gain<br/><math>\text{Log}^{-1}(\text{dBm}/10)</math><br/>(dB)</i> |
|-----------------------------|----------------------------|---------------------------------------|--|
| Shanghai Universe (Chain A) | 2.4                        | 3.24                                  | 2.11   |
| Shanghai Universe (Chain A) | 5                          | 4.97                                  | 3.14   |
| Shanghai Universe (Chain B) | 2.4                        | 3.24                                  | 2.11   |
| Shanghai Universe (Chain B) | 5                          | 4.97                                  | 3.14   |

$G = \text{Log}^{-1}(\text{dB antenna gain}/10)$

**Power density at the specific separation:**

| <i>Antenna</i>              | <i>Frequency (GHz)</i> | <i>Power input to the antenna (P) (mW)</i> | <i>Numeric Power Gain of the Antenna (G) (dB)</i> | <i>Maximum Power Spectral Density <math>S=PG/(4R^2\pi)</math> (mW/cm<sup>2</sup>)</i> | <i>Maximum Power Spectral Density Limit (mW/cm<sup>2</sup>)</i> |
|-----------------------------|------------------------|--|---|---|---|
| Shanghai Universe (Chain A) | 2.4                    | 47.21                                      | 2.11  | 0.020   | 1.00  |
| Shanghai Universe (Chain A) | 5                      | 49.43                                      | 3.14  | 0.031   | 1.00  |
| Shanghai Universe (Chain B) | 2.4                    | 47.86                                      | 2.11  | 0.020   | 1.00  |
| Shanghai Universe (Chain B) | 5                      | 49.43                                      | 3.14  | 0.031   | 1.00  |

$$S = PG/(4R^2\pi)$$

Where

S = Maximum power density (mW/cm<sup>2</sup>)

P = Power input to the antenna (mW).

G = Numeric power gain of the antenna

R = Distance to the center of the radiation of the antenna (20cm = limit for MPE)

The maximum permissible exposure (MPE) for the general population is 1mW/cm<sup>2</sup>.

The power density at 20cm does not exceed the 1mW/cm<sup>2</sup> limit. Therefore, the exposure condition is compliant with FCC rules.

**Aggregate Maximum Power Spectral Density:**

| <i>Antenna</i>    | <i>Frequency (GHz)</i> | <i>Maximum Power Spectral Density Chain A (mW/cm<sup>2</sup>)</i> | <i>Maximum Power Spectral Density Chain B (mW/cm<sup>2</sup>)</i> | <i>Maximum Power Spectral Density Aggregate Chain A &amp; B (mW/cm<sup>2</sup>)</i> | <i>Maximum Power Spectral Density Limit (mW/cm<sup>2</sup>)</i> |
|-------------------|------------------------|---|---|---|---|
| Shanghai Universe | 2.4                    | 0.020   | 0.020   | 0.040   | 1.00  |
| Shanghai Universe | 5                      | 0.031   | 0.031   | 0.062   | 1.00  |
