

Test Report Serial Number:

45461529 R2.0

Test Report Date:

1 November 2019

Project Number:

1460

EMC Test Report - New Filing

Applicant:

Xetawave LLC
258 South Taylor Ave
Louisville, Colorado, 80027
United States

Xetawave, LLC
258 South Taylor Ave
Louisville, CO, 80027
United States of America

FCC ID:

PEJ-938240

Product Model Number / HVIN

XETA4-TMFA

IC Registration Number

11169A-04003

Product Name / PMN

XETA4-TMFA

In Accordance With:

FCC 47 CFR Part 90

Private Land Mobile Radio Services

RSS-GEN, RSS-119 Issue 12

Land Mobile and Fixed Equipment Operating in the Frequency Range 27.41-960 MHz

Approved By:

Ben Hewson, President

Celltech Labs Inc.
21-364 Lougheed Rd.
Kelowna, BC, V1X 7R8
Canada

Test Lab Certificate: 2470.01

Industry
Canada

IC Registration 3874A-1

FCC Registration: CA3874

Client Information	
Applicant Name	Xetawave LLC
Applicant Address	258 South Taylor Ave
	Louisville, Colorado, 80027
	USA
DUT Information	
Device Identifier(s):	FCC ID: PEJ-938240
	IC: 11169A-04003
Device Type:	Digital Transceiver Module
Type of Equipment/Equipment Class:	FCC Part 90 - Licensed Non-Broadcast Station Transmitter (TNB)
	RSS-119 - Land-Mobile Transmitter and Receiver (27.41–960 MHz)
Device Model(s) / HVIN:	XETA4-TMFA
Device Marketing Name / PMN:	XETA4-TMFA
Firmware Version ID Number / FVIN:	n/a
Host Marketing Name / HMN:	n/a
Test Sample Serial No.:	T/A Sample - Identical Prototype
Transmit Frequency Range: (FCC Only)	450MHz - 470MHz
Transmit Frequency Range: (ISED Only)	406.1MHz - 430MHz, 450MHz - 470MHz
Number of Channels:	n/a
Manuf. Max. Rated Output Power:	10W
Manuf. Max. Rated BW/Data Rate:	See Section 8.0
Antenna Make and Model:	n/a
Antenna Type and Gain:	11.2dBi
Modulation:	MSK, QPSK, 8PSK, 16QAM, 32QAM, 64QAM
Mode:	n/a
Emission Designator:	See Section 8.0
DUT Power Source:	12 VDC External
Deviation(s) from standard/procedure:	None
Modification of DUT:	None

3.0 SCOPE

This Certification Report was prepared on behalf of:

XetaWave LLC

,(the '*Applicant*'), in accordance with the applicable Federal Communications Commission (FCC) CFR 47 and Innovation, Scientific and Economic Development (ISED) Canada rules parts and regulations (the '*Rules*'). The scope of this investigation was limited to only the equipment, devices and accessories (the '*Equipment*') supplied by the *Applicant*. The tests and measurements performed on this *Equipment* were only those set forth in the applicable *Rules* and/or the Test and Measurement Standards they reference. The *Rules* applied and the Test and Measurement Standards used during this evaluation appear in the Normative References section of this report. The limits set forth in the technical requirements of the applicable *Rules* were applied to the measurement results obtained during this evaluation and ,unless otherwise noted, these limits were used as the Pass/Fail criteria. The Pass/Fail statements made in this report apply to only the tests and measurements performed on only the *Equipment* tested during this evaluation. Where applicable and permissible, information including test and measurement data and/or results from previous evaluations of same or similar equipment, devices and/or accessories may be cited in this report.

As per FCC 47 CFR Part §2.1091 and §2.1093, an RF Exposure evaluation report is required for this *Equipment* and the results of the RF Exposure evaluation appear in a separate exhibit from this report.

The Receiver of this *Equipment* is subject to Equipment Certification or Supplier's Declaration of Conformity (SDoC) in accordance with 47 CFR Part §15.101. The Receiver was evaluated in accordance with 47 CFR Part §15 Subpar B and ICES-003. A statement of the application of the SDoC procedure appears in a separate exhibit from this report.

Application: This is an application for a new FCC and ISED certification.

6.0 FACILITIES AND ACCREDITATIONS

Facility and Accreditation:

The facilities used to evaluate this device outlined in this report are located at 21-364 Lougheed Road, Kelowna, British Columbia, Canada V1X 7R8. The radiated emissions site (OATS) conforms to the requirements set forth in ANSI C63.4 and is filed and listed with the FCC under Test Firm Registration Number CA3874 and Innovation, Science and Economic Development Canada under Test Site File Number ISED 3874A-1. Celltech is accredited to ISO 17025, through accrediting body A2LA and with certificate 2470.01.

Test Procedure

Normative Reference	FCC 47 CFR §2.1046, §90.279, RSS-Gen (6.12), RSS-119 (5.4) ANSI C63.26 (5.2)
----------------------------	---

Limits

47 CFR §90.279	250W ERP at EAH: 0 - 150m
RSS-119 (5.4)	The output power shall be within ± 1 dB of the manufacturer's rated power listed in the equipment specifications.

General Procedure

ANSI C63.26	5.2 General Compute the power by integrating the spectrum across the OBW of the signal using the instrument's band or channel power measurement function, with the band/channel limits set equal to the OBW band edges.
-------------	---

Test Setup

Appendix A - Figure A.1

Measurement Procedure

The DUT was connected to a Spectrum Analyzer (SA) via a 30dB attenuator connected to the DUT's antenna port. The SA was configured as above using the Channel Power measurement function. The output power of the DUT was set to the manufacturer's highest output power setting and set to CW mode. The DUT was set to transmit at its maximum Duty Cycle.

	ANSI C63.26 5.4.4

Measurement Procedure

ANSI C63.26 5.4.4 Occupied bandwidth—Power bandwidth (99%) measurement procedure³⁰

The OBW is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers are each equal to 0.5% of the total mean power of the given emission.

The following procedure shall be used for measuring (99%) power bandwidth:

- The spectrum analyzer center frequency is set to the nominal EUT channel center frequency. The frequency span for the spectrum analyzer shall be set wide enough to capture all modulation products including the emission skirts (typically a span of $1.5 \times \text{OBW}$ is sufficient).
- The nominal IF filter 3 dB bandwidth (RBW) shall be in the range of 1% to 5% of the anticipated OBW, and the VBW shall be $\geq 3 \times \text{RBW}$.
- Set the reference level of the instrument as required to prevent the signal amplitude from exceeding the maximum spectrum analyzer input mixer level for linear operation.
- Set the detection mode to peak, and the trace mode to max-hold.

Test Setup

Appendix A

Figure A.1

Measurement Setup

The DUT was connected to a Spectrum Analyzer (SA) via a 30dB attenuator connected to the DUT's antenna port. The SA was configured as above using the SA 99% Occupied Bandwidth measurement function. The output power of the DUT was set to the manufacturer's highest output power setting and set to MSK, QPSK, 8PSK, 16QAM, 32QAM and 64QAM modulation mode. The DUT was set to transmit at its maximum Duty Cycle.

Notes to Tables 8.1, 8.2 and 8.3

Note 1.

This device meets the spectrum efficiency requirements of §90.203(j)(3). In accordance with §90.209(b)(5) Note 3:

³Operations using equipment designed to operate with a 25 kHz channel bandwidth will be authorized a 20 kHz bandwidth. Operations using equipment designed to operate with a 12.5 kHz channel bandwidth will be authorized a 11.25 kHz bandwidth. Operations using equipment designed to operate with a 6.25 kHz channel bandwidth will be authorized a 6 kHz bandwidth. All stations must operate on channels with a bandwidth of 12.5 kHz or less beginning January 1, 2013, unless the operations meet the efficiency standard of §90.203(j)(3).

This device is permitted to operate with a 25kHz channel bandwidth.

Note 2:

This device is identical to FCC ID: PEJ-9384-XETA4HP. In April 2017 the FCC waived the emission designator limitations of §90.207(i) to permit the use of D1D and G1D emission designators. The D1D and G1D emission designators are permitted for use by this device.

Note 3:

Per ISSED RSS-119 (5.6):

5.6 Fixed Equipment With an Occupied Bandwidth Larger Than the Authorized Bandwidth Permitted in This Standard

Fixed equipment requiring an occupied bandwidth larger than the authorized bandwidth shown in Table 3 may be permitted if that the equipment complies with the three following conditions:

- (1) The equipment is allowed to have aggregate channels as per the SRSP for its operating frequency bands.
- (2) The ERP shall not be increased with increased occupied bandwidth.
- (3) The equipment shall employ an emission mask that does not result in more adjacent channel interference than the standard narrowband channel equipment emission mask specified in Table 3.

This device complies with (1) as it aggregates adjacent channels and (2) as the ERP does not increase with increased bandwidth. Emission Mask C was modified by increasing the upper and lower skirts by 25kHz (+/- 12.5kHz). The following emissions mask was used for compliance with (3):

Displacement Frequency f_d (kHz)	Minimum Attenuation (dB)
25kHz Channel Bandwidth	
$5 < f_d \leq 10$	$83\text{Log}_{10}(f_d/5)$
$10 < f_d \leq 50$	Lesser of: 50 or $29\text{Log}_{10}(f_d^2/11)$
$f_d > 50$	$43 + 10\text{Log}_{10}(P)$
50kHz Channel Bandwidth	
$17.5 < f_d \leq 22.5$	$83\text{Log}_{10}(f_d/5)$
$22.5 < f_d \leq 62.5$	Lesser of: 50 or $29\text{Log}_{10}(f_d^2/11)$
$f_d > 62.5$	$43 + 10\text{Log}_{10}(P)$

9.0 EMISSION MASK AND BAND EDGE

Test Conditions	
Normative Reference	FCC 47 CFR §2.1049, §90.210, RSS-Gen (6.7), RSS-119 (5.5) ANSI C63.26 7.2.3
Limits	
47 CFR §90.210 Notes 2, 5	421MHz - 512MHz: Note 2: Equipment designed to operate with a 25 kHz channel bandwidth must meet the requirements of Emission Mask B or C, as applicable. Equipment designed to operate with a 12.5 kHz channel bandwidth must meet the requirements of Emission Mask D, and equipment designed to operate with a 6.25 kHz channel bandwidth must meet the requirements of Emission Mask E. Note 5: Equipment designed to operate on 25 kilohertz bandwidth channels must meet the requirements of either Emission Mask B or G, whichever is applicable, while equipment designed to operate on 12.5 kilohertz bandwidth channels must meet the requirements of Emission Mask D. Equipment designed to operate on 25 kilohertz bandwidth channels may alternatively meet the Adjacent Channel Power limits of §90.221.
47 CFR §90.210(c)	(c) Emission Mask C. For transmitters that are not equipped with an audio low-pass filter, the power of any emission must be attenuated below the unmodulated carrier output power (P) as follows: (1) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5 kHz, but not more than 10 kHz: At least $83\log_{10}(f_d/5)$ dB; (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 10 kHz, but not more than 250 percent of the authorized bandwidth: At least $29\log_{10}(f_d/2/11)$ dB or 50 dB, whichever is the lesser attenuation; (3) On any frequency removed from the center of the authorized bandwidth by more than 250 percent of the authorized bandwidth: At least $43 + 10\log_{10}(P)$ dB.
47 CFR §90.210(d)	(d) Emission Mask D—12.5 kHz channel bandwidth equipment. For transmitters designed to operate with a 12.5 kHz channel bandwidth, any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows: (1) On any frequency from the center of the authorized bandwidth f_0 to 5.625 kHz removed from f_0: Zero dB. (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5.625 kHz but no more than 12.5 kHz: At least $7.27(f_d - 2.88 \text{ kHz})$ dB. (3) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 12.5 kHz: At least $50 + 10\log_{10}(P)$ dB or 70 dB, whichever is the lesser attenuation.
47 CFR §90.210(e)	(e) Emission Mask E—6.25 kHz or less channel bandwidth equipment. For transmitters designed to operate with a 6.25 kHz or less bandwidth, any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows: (1) On any frequency from the center of the authorized bandwidth f_0 to 3.0 kHz removed from f_0: Zero dB. (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 3.0 kHz but no more than 4.6 kHz: At least $30 + 16.67(f_d - 3 \text{ kHz})$ or $55 + 10\log_{10}(P)$ or 65 dB, whichever is the lesser attenuation. (3) On any frequency removed from the center of the authorized bandwidth by more than 4.6 kHz: At least $55 + 10\log_{10}(P)$ or 65 dB, whichever is the lesser attenuation.

Test Conditions

Normative Reference	FCC 47 CFR §2.1049, §90.210, RSS-Gen (6.7), RSS-119 (5.5)
	ANSI C63.26 7.2.3

Measurement Procedure

47 CFR §90.210(d)(4) 47 CFR §90.210(e)(4)	(4) The reference level for showing compliance with the emission mask shall be established using a resolution bandwidth sufficiently wide (usually two or three times the channel bandwidth) to capture the true peak emission of the equipment under test. In order to show compliance with the emission mask up to and including 50 kHz removed from the edge of the authorized bandwidth, adjust the resolution bandwidth to 100 Hz with the measuring instrument in a peak hold mode. A sufficient number of sweeps must be measured to insure that the emission profile is developed. If video filtering is used, its bandwidth must not be less than the instrument resolution bandwidth. For emissions beyond 50 kHz from the edge of the authorized bandwidth, see paragraph (o) of this section. If it can be shown that use of the above instrumentation settings do not accurately represent the true interference potential of the equipment under test, an alternate procedure may be used provided prior commission approval is obtained.
RSS-119 (4.2.1)	4.2.1 Emission Masks B, C, G, I and J Unwanted emission measurements can be in peak or averaging mode, provided that the same parameter, peak power or average power, used for the transmitter's output power measurement is also used for the unwanted emission measurements. Except where otherwise stated, on any frequency removed from the carrier frequency by more than 250% of the authorized bandwidth, a resolution bandwidth of at least 100 kHz must be used for frequencies to be measured at or below 1 GHz, and a resolution bandwidth of at least 1 MHz must be used for frequencies to be measured above 1 GHz. If a narrower resolution bandwidth is used, power integration shall be applied.
RSS-119 (4.2.2)	4.2.2 Emission Masks D, E, F and Y In order to show compliance with the emission mask up to and including 50 kHz removed from the edge of the authorized bandwidth, adjust the resolution bandwidth to 100 Hz with the measuring instrument in a peak mode. For emissions beyond 50 kHz from the edge of the authorized bandwidth, the resolution bandwidth shall be 100 kHz for frequencies at or below 1 GHz, and 1 MHz for frequencies above 1 GHz. However, for emission mask F, at a displacement frequency of less than 3.75 kHz, the resolution bandwidth shall be 30 Hz.

Note 1: RBW = 300Hz

Note 2: RBW = Specified in Section 4.2.1

Note 3: RBW = Specified in Section 4.2.2

Test Setup	Appendix A	Figure A.1
-------------------	-------------------	-------------------

Measurement Setup

The DUT was connected to a Spectrum Analyzer (SA) via a 30dB attenuator connected to the DUT's antenna port. The SA was configured as above using the appropriate mask and the SA Limit Check function. The output power of the DUT was set to the manufacturer's highest output power setting (except as noted) and set to MSK, QPSK, 8PSK, 16QAM, 32QAM and 64QAM modulation mode. The DUT was set to transmit at its maximum Duty Cycle.

Notes to Emissions Mask

Note 1.

This device meets the spectrum efficiency requirements of §90.203(j)(3). In accordance with §90.209(b)(5) Note 3:

³Operations using equipment designed to operate with a 25 kHz channel bandwidth will be authorized a 20 kHz bandwidth. Operations using equipment designed to operate with a 12.5 kHz channel bandwidth will be authorized a 11.25 kHz bandwidth. Operations using equipment designed to operate with a 6.25 kHz channel bandwidth will be authorized a 6 kHz bandwidth. All stations must operate on channels with a bandwidth of 12.5 kHz or less beginning January 1, 2013, unless the operations meet the efficiency standard of §90.203(j)(3).

This device is permitted to operate with a 25kHz channel bandwidth.

Note 2:

This device is identical to FCC ID: PEJ-9384-XETA4HP. In April 2017 the FCC waived the emission designator limitations of §90.207(i) to permit the use of D1D and G1D emission designators. The D1D and G1D emission designators are permitted for use by this device.

Note 3:

Per ISSED RSS-119 (5.6):

5.6 Fixed Equipment With an Occupied Bandwidth Larger Than the Authorized Bandwidth Permitted in This Standard

Fixed equipment requiring an occupied bandwidth larger than the authorized bandwidth shown in Table 3 may be permitted if that the equipment complies with the three following conditions:

- (1) The equipment is allowed to have aggregate channels as per the SRSP for its operating frequency bands.
- (2) The ERP shall not be increased with increased occupied bandwidth.
- (3) The equipment shall employ an emission mask that does not result in more adjacent channel interference than the standard narrowband channel equipment emission mask specified in Table 3.

This device complies with (1) as it aggregates adjacent channels and (2) as the ERP does not increase with increased bandwidth. Emission Mask C was modified by increasing the upper and lower skirts by 25kHz (+/- 12.5kHz). The following emissions mask was used for compliance with (3):

Displacement Frequency f_d (kHz)	Minimum Attenuation (dB)
25kHz Channel Bandwidth	
$5 < f_d \leq 10$	$83\text{Log}_{10}(f_d/5)$
$10 < f_d \leq 50$	Lesser of: 50 or $29\text{Log}_{10}(f_d^2/11)$
$f_d > 50$	$43 + 10\text{Log}_{10}(P)$
50kHz Channel Bandwidth	
$17.5 < f_d \leq 22.5$	$83\text{Log}_{10}(f_d/5)$
$22.5 < f_d \leq 62.5$	Lesser of: 50 or $29\text{Log}_{10}(f_d^2/11)$
$f_d > 62.5$	$43 + 10\text{Log}_{10}(P)$

10.0 CONDUCTED SPURIOUS EMISSIONS

Test Conditions	
Normative Reference	FCC 47 CFR §2.1049, §90.210, RSS-Gen (6.7), RSS-119 (5.5)
	ANSI C63.26 7.2.3
Limits	
47 CFR §90.210 Notes 2, 5	421MHz - 512MHz: Note 2: Equipment designed to operate with a 25 kHz channel bandwidth must meet the requirements of Emission Mask B or C, as applicable. Equipment designed to operate with a 12.5 kHz channel bandwidth must meet the requirements of Emission Mask D, and equipment designed to operate with a 6.25 kHz channel bandwidth must meet the requirements of Emission Mask E. Note 5: Equipment designed to operate on 25 kilohertz bandwidth channels must meet the requirements of either Emission Mask B or G, whichever is applicable, while equipment designed to operate on 12.5 kilohertz bandwidth channels must meet the requirements of Emission Mask D. Equipment designed to operate on 25 kilohertz bandwidth channels may alternatively meet the Adjacent Channel Power limits of §90.221.
47 CFR §90.210(c)	(c) Emission Mask C. For transmitters that are not equipped with an audio low-pass filter, the power of any emission must be attenuated below the unmodulated carrier output power (P) as follows: (1) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5 kHz, but not more than 10 kHz: At least $83\log_{10}(f_d/5)$ dB; (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 10 kHz, but not more than 250 percent of the authorized bandwidth: At least $29\log_{10}(f_d/2/11)$ dB or 50 dB, whichever is the lesser attenuation; (3) On any frequency removed from the center of the authorized bandwidth by more than 250 percent of the authorized bandwidth: At least $43 + 10\log_{10}(P)$ dB.
47 CFR §90.210(d)	(d) Emission Mask D—12.5 kHz channel bandwidth equipment. For transmitters designed to operate with a 12.5 kHz channel bandwidth, any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows: (1) On any frequency from the center of the authorized bandwidth f_0 to 5.625 kHz removed from f_0: Zero dB. (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5.625 kHz but no more than 12.5 kHz: At least $7.27(f_d - 2.88 \text{ kHz})$ dB. (3) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 12.5 kHz: At least $50 + 10\log_{10}(P)$ dB or 70 dB, whichever is the lesser attenuation.
47 CFR §90.210(e)	(e) Emission Mask E—6.25 kHz or less channel bandwidth equipment. For transmitters designed to operate with a 6.25 kHz or less bandwidth, any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows: (1) On any frequency from the center of the authorized bandwidth f_0 to 3.0 kHz removed from f_0: Zero dB. (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 3.0 kHz but no more than 4.6 kHz: At least $30 + 16.67(f_d - 3 \text{ kHz})$ or $55 + 10\log_{10}(P)$ or 65 dB, whichever is the lesser attenuation. (3) On any frequency removed from the center of the authorized bandwidth by more than 4.6 kHz: At least $55 + 10\log_{10}(P)$ or 65 dB, whichever is the lesser attenuation.

	$f_d > 4.6$ (see Note 3)	Whichever is the lesser: 57 or $55 + \text{Log}_{10}(P)$

Test Conditions	
Normative Reference	FCC 47 CFR §2.1049, §90.210, RSS-Gen (6.7), RSS-119 (5.5) ANSI C63.26 7.2.3
Measurement Procedure	
47 CFR §90.210(d)(4) 47 CFR §90.210(e)(4)	(4) The reference level for showing compliance with the emission mask shall be established using a resolution bandwidth sufficiently wide (usually two or three times the channel bandwidth) to capture the true peak emission of the equipment under test. In order to show compliance with the emission mask up to and including 50 kHz removed from the edge of the authorized bandwidth, adjust the resolution bandwidth to 100 Hz with the measuring instrument in a peak hold mode. A sufficient number of sweeps must be measured to insure that the emission profile is developed. If video filtering is used, its bandwidth must not be less than the instrument resolution bandwidth. For emissions beyond 50 kHz from the edge of the authorized bandwidth, see paragraph (o) of this section. If it can be shown that use of the above instrumentation settings do not accurately represent the true interference potential of the equipment under test, an alternate procedure may be used provided prior commission approval is obtained.
RSS-119 (4.2.1)	4.2.1 Emission Masks B, C, G, I and J Unwanted emission measurements can be in peak or averaging mode, provided that the same parameter, peak power or average power, used for the transmitter's output power measurement is also used for the unwanted emission measurements. Except where otherwise stated, on any frequency removed from the carrier frequency by more than 250% of the authorized bandwidth, a resolution bandwidth of at least 100 kHz must be used for frequencies to be measured at or below 1 GHz, and a resolution bandwidth of at least 1 MHz must be used for frequencies to be measured above 1 GHz. If a narrower resolution bandwidth is used, power integration shall be applied.
RSS-119 (4.2.2)	4.2.2 Emission Masks D, E, F and Y In order to show compliance with the emission mask up to and including 50 kHz removed from the edge of the authorized bandwidth, adjust the resolution bandwidth to 100 Hz with the measuring instrument in a peak mode. For emissions beyond 50 kHz from the edge of the authorized bandwidth, the resolution bandwidth shall be 100 kHz for frequencies at or below 1 GHz, and 1 MHz for frequencies above 1 GHz. However, for emission mask F, at a displacement frequency of less than 3.75 kHz, the resolution bandwidth shall be 30 Hz.
Note 1: RBW = 300Hz Note 2: RBW = Specified in Section 4.2.1 Note 3: RBW = Specified in Section 4.2.2	
Test Setup	Appendix A Figure A.1
Measurement Setup	
The DUT was connected to a Spectrum Analyzer (SA) via a 30dB attenuator connected to the DUT's antenna port. The SA was configured as above using the appropriate mask and the SA Limit Check function. The output power of the DUT was set to the manufacturer's highest output power setting (except as noted) and set to MSK, QPSK, 8PSK, 16QAM, 32QAM and 64QAM modulation mode. The DUT was set to transmit at its maximum Duty Cycle.

11.0 RADIATED SPURIOUS EMISSIONS

Test Conditions

Normative Reference	FCC 47 CFR §2.1053, RSS-Gen (6.13)
	ANSI C63.26

Limits

47 CFR §2.1053	§2.1053 Measurements required: Field strength of spurious radiation. (a) Measurements shall be made to detect spurious emissions that may be radiated directly from the cabinet, control circuits, power leads, or intermediate circuit elements under normal conditions of installation and operation. Curves or equivalent data shall be supplied showing the magnitude of each harmonic and other spurious emission.
RSS-Gen 6.13	6.13 Transmitter unwanted emissions When the unwanted emissions limits are defined in relative terms, the same parameter, peak power or average power, shall be used as the reference for both the transmitter's output power and the unwanted emissions measurements.

Measurement Setup

The DUT was placed on a turntable on a 3m OATS. The output power of the DUT was set to the manufacturer's highest output power setting (except as noted) and set to MSK, QPSK, 8PSK, 16QAM, 32QAM and 64QAM modulation mode. The DUT was set to transmit at its maximum Duty Cycle. Emissions were evaluated at a vertical height from 1 - 4 m while the DUT was rotated from 0 to 360°.

Plot 11.1 – Radiates Tx Spurious Emissions – OATS - Horizontal

Plot 11.2 – Radiates Tx Spurious Emissions – OATS - Vertical

Table 11.1 – Summary of Radiated Tx Emissions

Radiated Tx Spurious Emissions							
Channel Frequency (MHz)	BW (MHz)	Modulation	Power Setting (dBm)	Transmit Duty Cycle (%)	Antenna Polarization	Emission Frequency (MHz)	Measured Emission (dBuV @3m)
418.0	n/a	CW	Max	100	Vertical	913.9	43.28

12.0 TRANSIENT FREQUENCY BEHAVIOR

Test Conditions

Normative Reference	FCC 47 CFR §90.214, RSS-Gen, RSS-119 (5.9)
	TIA-603-E (2.2.19.3)

Limits

47 CFR §90.214	Transmitters designed to operate in the 150-174 MHz and 421-512 MHz frequency bands must maintain transient frequencies within the maximum frequency difference limits during the time intervals indicated: Transient Frequency Behavior for Equipment Designed to Operate on 6.25 kHz Channels	
	Maximum Frequency Difference	Time Interval (421 - 512MHz)
	+ / - 6.25kHz	T ₁ : 10msec
	+ / - 3.125kHz	T ₂ : 10msec
	+ / - 6.25kHz	T ₃ : 10msec
RSS-119	5.9 Transient Frequency Behaviour	
	When a transmitter is turned on, the radio frequency may take some time to stabilize. During this initial period, the frequency error or frequency difference (i.e., between the instantaneous and the steady state frequencies) shall not exceed the limits specified in Table 18.	
	Maximum Frequency Difference	Time Interval (421 - 512MHz)
	+ / - 6.25kHz	T ₁ : 10msec
	+ / - 3.125kHz	T ₂ : 10msec
	+ / - 6.25kHz	T ₃ : 10msec

Measurement Procedure

The DUT was connected as shown in Figure A.6. The DUT was set up to transmit a CW tone at 460MHz. The DUT output was combined with a Signal Generator set with a transmit frequency of 460MHz with 1kHz FM modulation and +/- 25kHz deviation. The output of the combination network was connected to a Modulation Analyzer. The Modulation output of the Modulation Analyzer was connected to an oscilloscope. The transient frequency behavior was observed while the DUT transmitter was turned on and off.

Test Setup	Appendix A	Figure A.6

Plot 12.1 – Transient Frequency Behavior, Tx OFF

13.0 FREQUENCY STABILITY

Test Conditions

Normative Reference	FCC 47 CFR §2.1055, §90.213, RSS-Gen, RSS-119 (5.3)
----------------------------	---

Limits

47 CFR §25.202	(a) Unless noted elsewhere, transmitters used in the services governed by this part must have a minimum frequency stability as specified in the following table. Note 7: In the 421-512 MHz band, fixed and base stations with a 12.5 kHz channel bandwidth must have a frequency stability of 1.5 ppm. Fixed and base stations with a 6.25 kHz channel bandwidth must have a frequency stability of 0.5 ppm.
RSS-170	5.2. Frequency Stability The carrier frequency shall not depart from the reference frequency in excess of the values given in Table 1. For transmitters that have an output power of less than 120 mW, the frequency stability shall comply with the limits listed in Table 1 or, alternatively, with the conditions in Section 5.10. (0.5ppm for 6.25kHz BW Channel)

Measurement Procedure

47 CFR §2.1055	Frequency Stability (a) The frequency stability shall be measured with variation of ambient temperature as follows: (1) From -30° to +50° centigrade for all equipment except that specified in paragraphs (a) (2) and (3) of this section. (b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. (d) The frequency stability shall be measured with variation of primary supply voltage as follows: (1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

Rented Equipment								

* Used during the course of this investigation

NCR: No Calibration Required

COU: Calibrate On Use

APPENDIX C – MEASUREMENT INSTRUMENT UNCERTAINTY

CISPR 16-4 Measurement Uncertainty (U_{LAB})

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence interval using a coverage factor of $k=2$

30MHz - 200MHz

$$U_{LAB} = 5.14\text{dB} \quad U_{CISPR} = 6.3\text{dB}$$

200MHz - 1000MHz

$$U_{LAB} = 5.90\text{dB} \quad U_{CISPR} = 6.3\text{dB}$$

1GHz - 6GHz

$$U_{LAB} = 4.80\text{dB} \quad U_{CISPR} = 5.2\text{dB}$$

6GHz - 18GHz

$$U_{LAB} = 5.1\text{dB} \quad U_{CISPR} = 5.5\text{dB}$$

If the calculated uncertainty U_{lab} is **less** than U_{CISPR} then:

- | | |
|---|---|
| 1 | Compliance is deemed to occur if NO measured disturbance exceeds the disturbance limit |
| 2 | Non-Compliance is deemed to occur if ANY measured disturbance EXCEEDS the disturbance limit |

If the calculated uncertainty U_{lab} is **greater** than U_{CISPR} then:

- | | |
|---|--|
| 3 | Compliance is deemed to occur if NO measured disturbance, increased by ($U_{lab} - U_{CISPR}$), exceeds the disturbance limit |
| 4 | Non-Compliance is deemed to occur if ANY measured disturbance, increased by ($U_{lab} - U_{CISPR}$), EXCEEDS the disturbance limit |
