

PEY3000AS2 Certification answers to TCB questions:

Dear Ben and Mark,

Thank you for your business. We have a few details to address before we can proceed to issue the grant for this device.

1. I need a photo of the external antenna referenced in the test report.

*Photo provided.*

2. Please provide documentation on the external antenna connector compliance with the unique connector requirement of 15.203.

*just to confirm the connector used for the external antenna is an MCX type.*

3. Please provide a field strength measurement for the emission at 2483.5MHz. This is the start of a restricted band and 2.4GHz devices in the highest channel may intrude into this band. I cannot reconstruct the field strength at 2483.5MHz from the plots contained in the test report, but perhaps you can.

*Test report supplement with radiated field strength data provided.*
