Federal Communications Commission
Equipment Authorization Division

RE: Class II Permissive Change for FCC ID: PHX-MMDS-CPE1

10/1/2001

To The Commission:

NextNet Wireless has completed testing of a horizontally polarized antenna to be used in its Expedience MMDS/ITFS Customer Premise Equipment (CPE). Within any geographic area, the spectrum is licensed for vertical or horizontal polarization. Pursuant to this issue, NextNet Wireless requests that the tested horizontally polarized antenna be authorized under the original Grant of Equipment Authorization for the FCC Identifier: PHX-MMDS-CPE1.

All data on file with the FCC is still applicable and the transmitter remains compliant. The following supporting documentation is attached; internal photos, test setup photo, and RF exposure data. The measurements recorded on the test sample for this FCC Product Certification were performed by myself.

Thank you for your attention to this matter.
