Hi Marina

I have not received the MPE report for this one. Please note that since this is not listed in 2.1091 as requiring MPE measurements, you can provide calculations for MPE. However, I will need an MPE report for this device for the base and CPE.

Also, while I understand that in the past several devices have been approved under one ID for both base and CPE – it does not seem that the devices in question are similar enough for this especially since this is not a part 15 device.

Please provide some detailed explanation as to why totally different devices should be under one ID even though the transmitter portion is similar. Do you have precedence for this other than this companies devices? Perhaps something from the FCC that allows this.

Thanks  
Dennis
