# ■ Description of Transmitter(HSN-1A)

## 1. Introduction

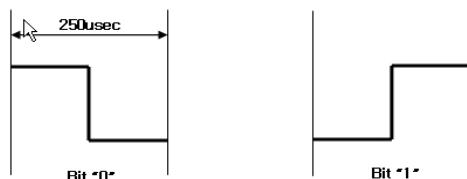

- HSN-1A is periodically measure and transfer to ECU the pressure and temperature inside of tire.
- It also monitors and transfers the condition of Battery and Sensor.
- Following is the major functionalities.
  - ▶ Measure and transfer the tire pressure
  - ▶ Measure and transfer inside temperature of tire.
  - ▶ Measure and transfer tire rotating condition by acceleration value.
  - ▶ Measure and transfer voltage of mounted battery
  - ▶ Measure and transfer abnormal condition of sensor (pressure and accelerometer)
  - ▶ Decide existence and nonexistence of abnormal pressure change occurs inside of tire.

## 2. ELECTRICAL CHARACTERISTICS

	Transmitter
Model Name	HSN-1A
Supply Voltage	DC 3V
Operating Voltage	DC 2.2 ~ 3V
Consumption current	TBD Max 12mA
Operating Frequency	315MHz( $\pm 30\text{kHz}$ )
Operating temperature	-40 ~ +120°C
Modulation	FSK(Manchester Code)
Bit Rate	4 Kbps

## 3. DESCRIPTION MODE

### 1) Bit Format

## 2) Frame Data Format

WU transferred data is composed of total 92bits and following is the structure of the data.

- ▶ Preamble (28bits)

Composed of 0xFFFFEA9. Upper 20bit 0xFFFF is the signal for bit check of ECU RF IC. 0xA9 is the signal for program Sync.

- ▶ ID (32bits)

Unique 32bit-identification that is assigned during production

- ▶ Pressure (8bits)

Sensor measured pressure in the tire

- ▶ Temperature (8bits)

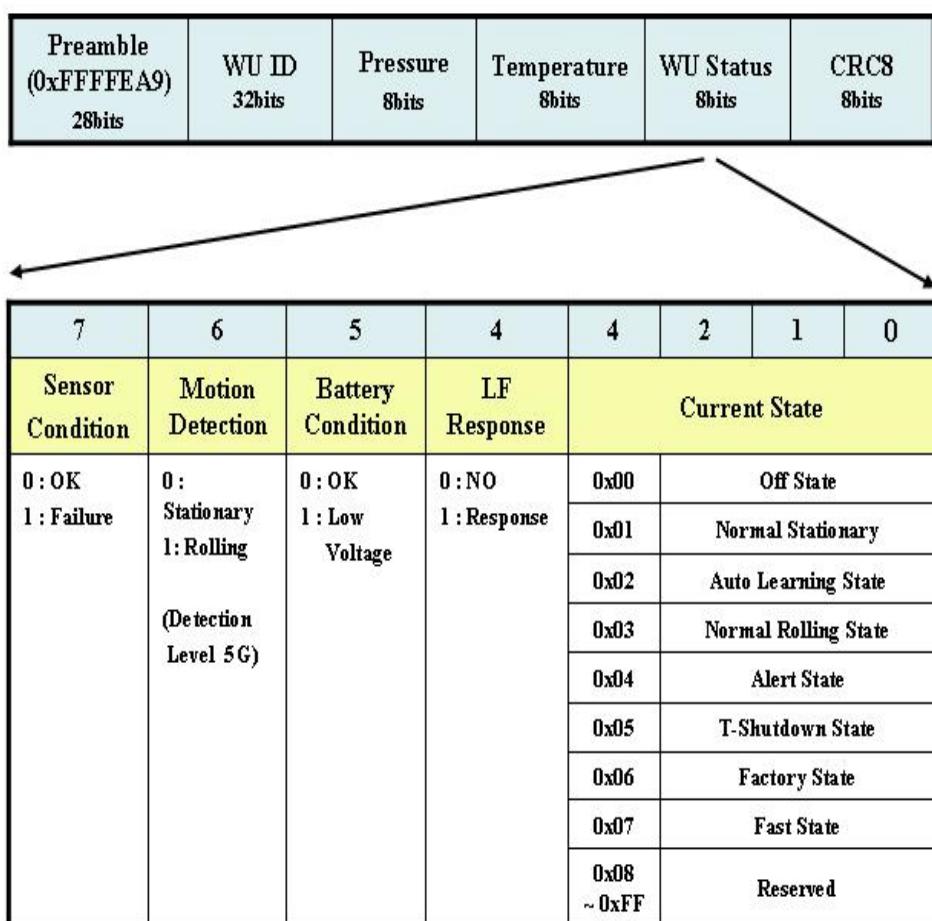

Sensor measured temperature in the tire

- ▶ Status (8bits)

Indication of current sensor condition

- ▶ CRC 8 (8bits)

Data failure check

### 3) Characteristics for each WU conditions

- WU operates within 8 different conditions. Each condition has own unique function to change the condition depends on tire rotation/non-rotation, LF protocol, and change in pressure.

WU State	Measurement Time				RF Transmission Interval	LF Response	
	P	T	ACC	LF		LF Command	Next State
OFF <sup>o</sup>	* <sup>o</sup>	* <sup>o</sup>	* <sup>o</sup>	4s <sup>o</sup>	* <sup>o</sup>	Factory_LF <sup>o</sup>	Factory <sup>o</sup>
						Test_LF <sup>o</sup>	OFF <sup>o</sup>

P(Pressure) T(Temperature) ACC(Acceleration) LF(Low Frequency)<sup>o</sup>

#### ► OFF

Only monitors LF signal and make no motion. Condition for transportation after production,

#### ► Normal Stationary

Condition of ACC < 9.5g, normally represents vehicle in stop mode

#### ► Normal Rolling

Condition of ACC ≥ 9.5g, normally represents vehicle in motion

#### ► Auto Learning

Condition of ACC ≥ 9.5g after WU places in NSS more than 10 minutes.

This condition is for faster auto learning of the ECU.

► Alert

Condition of when the tire pressure change about 20kPa(3psi) or tire interior temperature exceed 110°C. WU transmit message five times within four seconds period in order to send fast warning.

► Shutdown

When the measured tire interior temperature is above 120 °C , WU enters into sleep condition after sending message three times within four second period in order to protect itself.

► Factory

Transmit unchanged signal due to characteristic check in production.

► Fast

Condition for fast receiving rate test and product characteristics check during production.
