Attn. : Kim, Kyoung-Ok / Assistant Manager  
**MANUFACTURER** : HYUNDAI IT CORP.  
San 136-1, Ami-ri, Bubal-eub, Icheon-si, Gyeonggi-do,  
467-701, Korea  
**FCC CLASSIFICATION** : Class B Personal computers and peripherals  
**RULE PART(S)** : FCC Part 15 Subpart B  
**FCC PROCEDURE** : Certification  
**TEST REPORT No.** : ETLE071211.902  
**DATES OF TEST** : December 26, 2007  
**REPORT ISSUE DATE** : January 15, 2008  
**TEST LABORATORY** : ETL Inc. (FCC Registration Number : 95422)

This LCD MONITOR, Model L24C0F080 has been tested in accordance with the measurement procedures specified in ANSI C63.4-2003 at the ETL Test Laboratory and has been shown to be complied with the electromagnetic radiated emission limits specified in FCC Rule Part15 Subpart B:

I attest to the accuracy of data. All measurement herein was performed by me or was made under my supervision and is correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

The results of testing in this report apply to the product/system which was tested only. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

## 1. INTRODUCTION

The measurement test for radiated and conducted emission test were conducted at the ETL Inc. The site is constructed in conformance with the requirements of the ANSI C63.4-2003 and CISPR Publication 16. The ETL has site descriptions on file with the FCC for 3 m and 10 m site configurations. Detailed description of test facility was found to be in compliance with FCC Rules according to the ANSI C63.4-2003 and registered to the Federal Communications Commission (FCC Registration Number : 95422).

The measurement procedure described in American National Standard for Method of Measurement of Radio-Noise Emission from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz (ANSI C63.4-2003) was used in determining radiated and conducted emissions from the HYUNDAI IT CORP. Model: L24C0F080

## 2. PRODUCT INFORMATION

### 2.1 Equipment Description

The Equipment Under Test (EUT) is the Model: L24C0F080.

### 2.2 General Specification

<b>LCD</b>	24" viewable, Diagonal, Pixel pitch 0.270mm, A-si TFT
<b>Display area</b>	518.4(H) X 324(V), 24" Diagonal
<b>Number of color</b>	16.7 million colors ( true 8-bit color )
<b>Input signals</b>	<b>R.G.B Analog, 15pin D-sub / DVI-D / Component / HDMI</b>
<b>Frequency rate</b>	Horizontal : 30.0 to 80.0KHz, Vertical : 56 to 75Hz
<b>Maximum bandwidth</b>	162MHz
<b>Maximum resolution</b>	1920 X 1200 @ 60Hz
<b>Recommended resolution</b>	1920 X 1200 @ 60Hz
<b>Input voltage</b>	100-240V AC, 2.0A
<b>Power consumption</b>	85W(Typ.)
<b>Power management</b>	VESA DPMS
<b>Plug &amp; Play</b>	VESA DDC 1/2B
<b>OSD menu</b>	BRIGHTNESS, CONTRAST, H/W POSITION, CLOCK, PHASE, AUTO ADJUST AUTO COLOR, SOUND, OSD CONFIGURATION, INPUT SOURCE, DISPLAY CONTROL, GENERAL RECALL, LANGUAGE
<b>Audio system</b>	2ch X 3watts / Ear Phone Jack
<b>VESA FPMPI</b>	75mm X 75mm screw mounting
<b>Ergonomics, Safety and EMC</b>	Energystar CE, CB, TUV/GS, ICE/ EN60950-1, EN55022, EN55024
<b>Operating Temperature</b>	5 ~ 40° C
<b>Weight</b>	9.9Kg unpacked, 7.9Kg packed
<b>Dimensions (W X H X D mm)</b>	579.5 X 455.0 X 240 mm

## 3. DESCRIPTION OF TESTS

### 3.1 Conducted Emission Measurement

Conducted emissions measurements were made in accordance with section 11, "Measurement of Information Technology Equipment" of ANSI C63.4-2003. The measurements were performed over the frequency range of 0,15 MHz to 30 MHz using a 50  $\Omega$  / 50  $\mu$ H LISN as the input transducer to a Spectrum Analyzer or a Test Receiver. The measurements were made with the detector set for "Peak" amplitude within a bandwidth of 9 kHz or for "quasi-peak" within a bandwidth of 9 kHz.

The line-conducted emission test is conducted inside a shielded anechoic chamber room with 1 m x 1,5 m x 0,8 m wooden table which is placed 0,4 m away from the vertical wall and 1,5 m away from the side wall of the chamber room. Two LISN are bonded to the shielded room. The EUT is powered from the LISN and the support equipment is powered from the other LISN. Power to the LISNs are filtered by a noise cut power line filters. All electrical cables are shielded by braided tinned steel tubing with inner  $\phi$  1,2 cm. If the EUT is a DC-powered device, power will be derived from the source power supply it normally will be powered from and these supply lines will be connected to the LISN. Non-inductive bundling to a 1 m length shortened all interconnecting cables more than 1 m. Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. The RF output of the LISN was connected to the EMI Test Receiver to determine the frequency producing the maximum emission from the EUT. The frequency producing the maximum level was reexamined using to set Quasi-Peak mode by manual, after scanned by automatic Peak mode from 0,15 MHz to 30 MHz. The bandwidth of the spectrum analyzer was set to 9 kHz. The EUT, support equipment, and interconnecting cables were arranged and manipulated to maximize each emission.

Photographs of the worst-case emission can be seen in photographs of conducted emission test setup in Appendix B.

## 3.2 Radiated Emission Measurement

Radiated emission measurements were made in accordance with section 11, "Measurement of Information Technology Equipment" of ANSI C63.4-2003. The measurements were performed over the frequency range of 30 MHz to 1 GHz using antenna as the input transducer to a spectrum analyzer or a field intensity meter. The measurements were made with the detector set for "Quasi-peak" within a bandwidth of 120 kHz.

Preliminary measurements were made at 3 m using broadband antennas, and spectrum analyzer to determine the frequency producing the maximum emission in shielded room. Appropriate precaution was taken to ensure that all emission from the EUT were maximized and investigated. The system configuration, mode of operation, turntable azimuth and height with respect to the antenna were noted for each frequency found. The spectrum was scanned from 30 MHz to 1000 MHz using Log-Bicon antenna. Above 1 GHz, linearly polarized double ridge horn antennas were used. Final measurements were made open site at 3 m. The test equipment was placed on a wooden turn-table. Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. Each frequency found during pre-scan measurements was re-examined by manual. The detector function was set to CISPR Quasi-peak mode and the bandwidth of the receiver was set to 120 kHz or 1 MHz depending on the frequency of type of signal. The EUT, support equipment and interconnecting cables were re-configured to the set-up producing the maximum emission for the frequency and were placed on top of a 0,8 m high nonmetallic 1m x 1,5 m table. The EUT, support equipment, and interconnecting cables were re-arranged and manipulated to maximize each emission. The turntable containing the system was rotated; the antenna height was varied 1 m to 4 m and stopped at the azimuth or height producing the maximum emission. Each emission was maximized by: varying the mode of operation to the EUT and/or support equipment and changing the polarity of the antenna, whichever determined the worst-case emission.

Photographs of the worst-case emission can be seen in Photographs of the worst-case emission test setup can be seen in Appendix B.

## 4. TEST CONDITION

### 4.1 Test Configuration

The device was configured for testing in a typical fashion (as a customer would normally use it). During the tests, the following conditions and configurations were used.

### 4.2 EUT operation

Operating Mode	The worst operating condition
Stand by mode	X
1 920 X 1 200, 60 Hz, Full "H" pattern display mode	O

O: Worst case investigated during the Test

### 4.3 Support Equipment Used

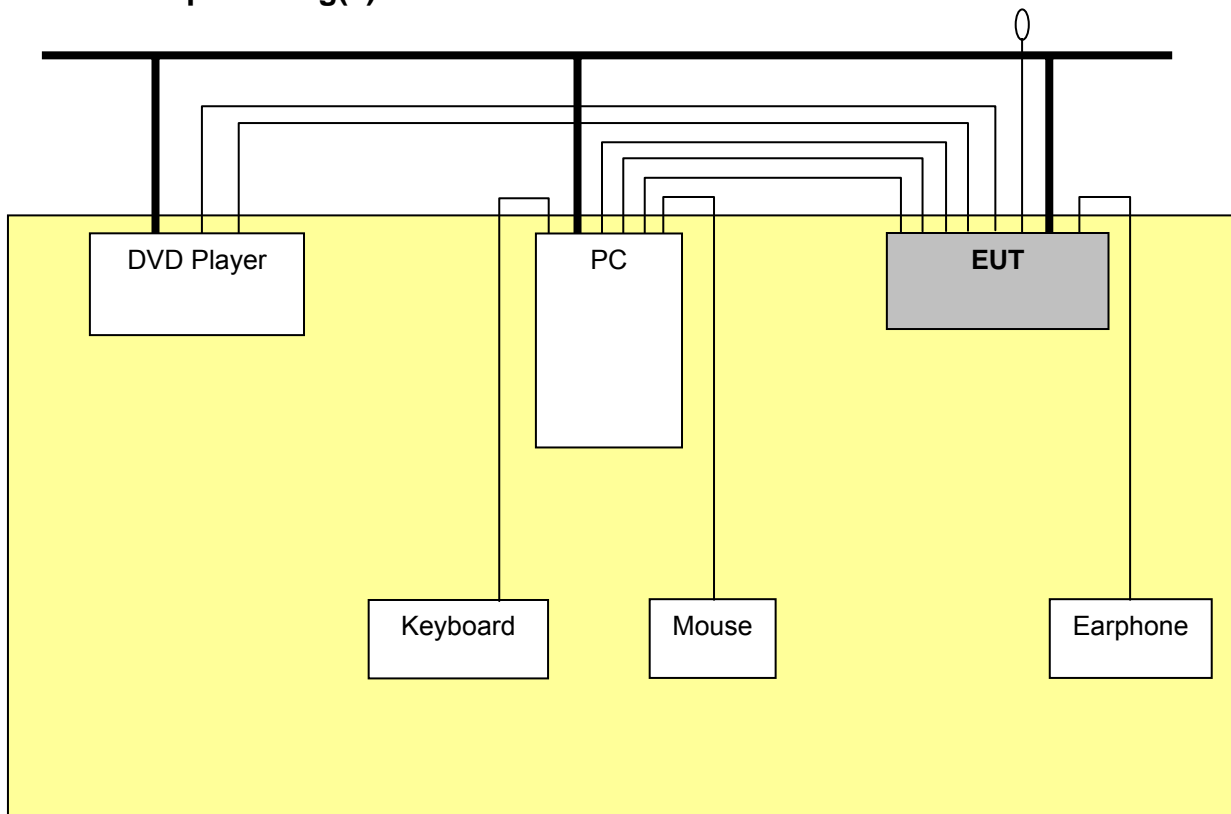

Description	Model Name	Serial No.	Manufacturer
Computer	DHM	G9MB71S	Dell Asia Pacific Sdn.
DVD Player	DVR-530C	NONE	Ellion Digital
Keyboard	KB-9963	B26960GBUKO13F	Chicony Electronics
Mouse	M-S34	LNA10212779	Logitech
Earphone	NONE	NONE	NONE

### 4.4 Type of Cables Used

Device from	Device to	Type of I/O port	Length(m)	Type of shield
EUT	Computer	RGB In	1,5	Shielded
EUT	Computer	DVI In	1,5	Shielded
EUT	Computer	AUDIO In	1,2	Shielded
EUT	Earphone	Earphone	1,2	Unshielded
EUT	DVD Player	Component In	1,5	Shielded
EUT	DVD Player	Component Audio In	1,5	Shielded
EUT	Termination	HDMI	1,5	Shielded
EUT	Power socket	AC Input	1,0	Unshielded
Computer	Keyboard	PS/2	1,5	Shielded
Computer	Mouse	PS/2	1,5	Shielded
Computer	Power socket	AC Input	1,0	Unshielded
DVD Player	Power socket	AC Input	1,0	Unshielded

## 5. TEST RESULTS

### 5.1 Summary of Test Results

The measurement results were obtained with the EUT tested in the conditions described in this report. Detailed measurement data and plots showing the maximum emission of the EUT are reported.

FCC Rule	Measurement Required	Result
15.107	Conducted Emission Measurement	<b>Passed by 11,70 dB</b>
15.109	Radiated Emission Measurement	<b>Passed by 3,20 dB</b>

The data collected shows that the HYUNDAI IT CORP. / **LCD MONITOR / L24C0F080** complied with technical requirements of above rules part 15.107 and 15.109 Class B Limits

The equipment is not modified anything, mechanical or circuits to improve EMI status during a measurement. No EMI suppression device(s) was added and/or modified during testing.

## 5.2 Conducted Emissions Measurement

<b>EUT</b>	LCD MONITOR / L24C0F080 (S/N: N/A)
<b>Limit apply to</b>	FCC Part 15.107 Class B
<b>Test Date</b>	December 26, 2007
<b>Operating Condition</b>	Full "H" pattern display mode (1 920 * 1 200, Vf = 60Hz)
<b>Result</b>	Passed by 11,70 dB

### Conducted Emission Test Data

The following table shows the highest levels of conducted emissions on both polarizations of hot and neutral line.

Detector mode: CISPR Quasi-Peak mode (6 dB Bandwidth: 9 kHz)

Frequency [MHz]	Result [dB $\mu$ V]		Phase (*L/**N)	Limit [dB $\mu$ V]		Margin [dB]	
	Quasi-peak	Average		Quasi-peak	Average	Quasi-peak	Average
0,151	54,2	35,7	H	65,9	55,9	11,7	20,2
0,249	39,4	35,6	H	61,8	51,8	22,4	16,2
0,374	39,7	36,3	N	58,4	48,4	18,7	12,1
0,509	36,0	28,9	H	56,0	46,0	20,0	17,1
1,510	40,7	27,6	H	56,0	46,0	15,3	18,4
4,076	30,7	23,6	N	56,0	46,0	25,3	22,4
7,507	28,4	20,9	N	60,0	50,0	31,6	29,1

#### NOTES :

- \* H : HOT Line , \*\*N : Neutral Line
- Margin value = Limit – Result
- Measurement were performed at the AC Power Inlet in the frequency band of 150 kHz ~ 30 MHz according to the FCC Part 15

Test Engineer : Jae Young, Kwon

Line: HOT Line

Limit : — Quasi-Peak  
— Average

Line: Neutral Line

Quasi-peak  Average 

## 5.3 Radiated Emissions Measurement

EUT	LCD MONITOR / L24C0F080 (S/N: N/A)
Limit apply to	FCC Part 15.109 Class B
Test Date	December 26, 2007
Operating Condition	Full "H" pattern display mode (1 920 * 1 200, Vf = 60Hz)
Result	Passed by 3,20 dB

### Radiated Emission Test Data

The following table shows the highest levels of radiated emissions on both polarizations of horizontal and vertical.  
Detector mode: CISPR Quasi – Peak mode (6 dB Bandwidth: 120 kHz)

Frequency [MHz]	Reading [dB $\mu$ V]	Polarization (*H/**V)	Ant. Factor [dB/m]	Cable Loss [dB]	Result [dB $\mu$ V/m]	Limit [dB $\mu$ V/m]	Margin [dB]
39,54	20,64	V	9,28	1,77	31,70	40,00	8,30
53,18	23,78	V	9,32	2,10	35,20	40,00	4,80
69,54	26,09	V	8,42	2,20	36,70	40,00	3,30
173,84	20,80	H	10,46	3,84	35,10	43,50	8,40
198,39	24,56	H	9,85	3,99	38,40	43,50	5,10
206,57	25,42	H	10,02	4,16	39,60	43,50	3,90
272,70	24,49	H	11,92	5,19	41,60	46,00	4,40
322,97	22,83	H	13,09	5,78	41,70	46,00	4,30
494,42	18,42	H	16,82	7,56	42,80	46,00	3,20

#### NOTES :

1. \* H : Horizontal polarization , \*\* V : Vertical polarization
2. Result = Reading + Antenna factor + Cable loss
3. Margin value = Limit - Result
4. The measurement was performed for the frequency range 30 MHz – 1 000 MHz according to FCC Part 15.109 Class B.

Test Engineer : **Jae Young, Kwon**

## 6. SAMPLE CALCULATION

### Sample Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor.  
The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF$$

Where FS = Field Strength

RA = Receiver Amplitude

AF = Antenna Factor

CF = Cable Attenuation Factor

$$dB(\mu V) = 20 \log_{10} (uV) : \text{Equation}$$

Example : @ 494,42 MHz

Class B Limit	=	46,00 dBuV/m
Reading	=	18,42 dBuV
Antenna Factor + Cable Loss	=	16,82 + 7,56 = 24,38 dBuV/m
Total	=	42,80 dBuV/m
Margin	=	46,00 – 42,80 = 3,20 dB
	=	3,20 dB below Limit

## 7. List of test equipments used for measurements
