Statement about processing gain for blip C11

The product blip C11, FCC ID PJPBLIP-C11, have the same processing gain as measured in the report EMN/ERH/TA-00:2502 that is one of the evidences for the Bluetooth module with the FCC ID CGK8001001. We can state this because the processing gain is completely determined by the radio and the correlator, which are part of the Bluetooth module included in blip C11 and we have made no software or hardware changes to it.
