

17 June 2002

FCC ID: PK5 GM401

REPORT NUMBER RO608941

The following information is supplementary to that contained in the above test report

SYSTEM CONFIGURATION DURING EMC TESTING

Test Configuration

The GM401 (EUT) was configured for all tests, fitted in a UbiNetics test harness and powered by a Thandar power supply.

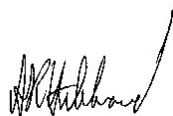

Link Mode

An IBM Thinkpad laptop was used to set up a communications link between the EUT and a Digital Radiocommunications Test Set. After the call was established the laptop was disconnected from the EUT and removed from the test environment.

The GM401 was tested in GSM 1900 mode on channels 512, 700 and 812.

Idle Mode

The EUT was powered up and initialised with the IBM Thinkpad laptop to camp on to the GSM base station simulator. No call was made. After initialisation the laptop was disconnected from the EUT and removed from the test environment.
