Gentlemen:

On behalf of Ericsson Microelectronics AB herewith is an application for multiple list of an identical equipment. Ericsson Microelectronics AB has assumed control and responsibility for a previously certified module and wishes to have the grant reflect this change. Further, some minor revisions to the PCB boards have occurred. Revision information is provided as part of the filing. These changes are associated with circuit sections related to emissions and do not affect timing, hopping system characteristics, processing gain or other non-related functions of the module. Although the changes were minor, in an abundance of caution, a new measurement report for fundamental and spurious emissions was obtained. This measurement report continues to show compliance.

Regards,

Phillip Inglis
