Hello,

I send again the Ddocument.(4.0 version of adobe).

I informed our customer about adding the users infor page, and he confirmed it.
Thanks and best regards.

Thank you for such a quick response. Some problems remain. The following still have opening errors - the error appear to be the lack of coordination between our adobe and the Korean version? Is it possible to send it ffrom a version of adobe without that?

Still need, free of error:

1. Manual
2. Schematics

Also, please confirm in your email that you will be adding the users info page that you sent to me in your manual. Any questions, please let me know.

Regards,

Marianne
