

RE-USE OF TEST RESULTS:

Test reports provided with this filing make reuse of results of Nokia product with FCC-ID "PPIRM-398".

Main differences between the products:

The WLAN feature has been added by assembling the WLAN chip and related components. The Bluetooth RF output has been re-routed.

The WLAN chip is placed under a shield which is already existing. Therefore, the "radiating box" has the same electrical outlines and shape. Following changes of components:

Added:	N6000, X6001, R6021, R6029
Removed:	R6020, R6024
Changed:	Z6000

SW configured to support WLAN and HAC.

Proposed conclusion:

Following tests were repeated:

Part 15C BT RF (covered by test report Salo_FCC_0833_08)
