Emission

Radiated Emissions

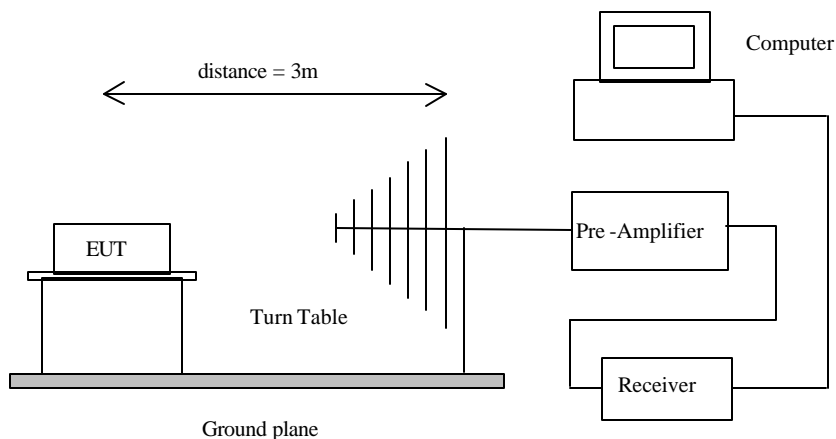

Test Requirement:	FCC 47CFR 15.109 Class B
Test Method:	ANSI C63.4:1992
Test Date:	2001-09-17
Mode of Operation:	On mode

Test Method:

The sample was placed 0.8m above the ground plane on the OATS *. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigate all operating modes, rotated about all 3 axis (X, Y & Z) to obtain worst position, manipulating interconnecting cables, rotating turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

*: OATS [Open area test site] located at HKSTC with a metal ground plane on filed with the FCC pursuant to section 2.948 of the FCC rules, with Registration Number: 90657.

Test Setup:

FCC ID: PQB-R128-P102

Limited for Radiated Emissions [FCC 47 CFR 15.109 Class B]:

Frequency Range [MHz]	Quasi-Peak Limits [μV/m]
30-88	100
88-216	150
216-960	200
Above 960	500

The emission limits shown in the above table are based on measurement employing a CISPR quasi-peak detector and above 1000MHz are base on measurements employing an average detector.

Results:

Radiated Emissions						
Average Value						
Frequency	Level @3m	Correction Factor	Field Strength	Field Strength	Limit @3m	Antenna Polarity
MHz	dBμV	dB/m	dBμV/m	μV/m	μV/m	
NO EMISSION DETECTED WITHIN 20dB OF THE FCC LIMITS						

** For effective averaging, the bandwidth of the video filter must be smaller than the resolution bandwidth. The higher the ratio of resolution bandwidth to video bandwidth, the greater the averaging will be recorded. Below setting for HP8572A EMI Receiver.

Resolution Bandwidth =3MHz
 Video Bandwidth =1Hz

FCC ID: PQB-R128-P102
