General Description

The EUT is a modem which is designed to control data flow. Normally, the EUT would be placed on a table top during operation. The EUT was, therefore, treated as table-top equipment during testing to simulate the end user environment. The electrical rating of the EUT is 120/240 V, 50/60 Hz, 1 Amps.

Equipment Under Test

Manufacturer	Model	Description	Serial Number	FCC ID
Aperto	Packet Wave 100	Modem	C13R10121X000009	

Other EUT Details

EUT Enclosure

The EUT enclosure is primarily constructed of fabricated sheet steel. It measures approximately 0 cm wide by 0 cm deep by 0 cm high.

Radiated Emissions

Test Specifics

Objective: The objective of this test session is to perform final qualification testing of the EUT with respect to the specification listed above.

Date of Test: 7/25/01
Test Engineer: egarcia
Test Location: SVOATS #3

Config. Used:
Config Change:
EUT Voltage: As noted in individual test run

General Test Configuration

The EUT and all local support equipment were located on the turntable for radiated emissions testing. Remote support equipment was located approximately 30 meters from the test area with all I/O connections routed overhead.

On the OATS, the measurement antenna was located 10 meters from the EUT for the measurement range 30 - 1000 MHz and 3m from the EUT for the frequency range 1 - 10 GHz.

Note, **preliminary** testing indicates that the emissions were maximized by orientation of the EUT and elevation of the measurement antenna. **Maximized** testing indicated that the emissions were maximized by orientation of the EUT, elevation of the measurement antenna, and manipulation of the EUT's interface cables.

Note, for testing above 1 GHz, the FCC specifies the limit as an average measurement. In addition, the FCC states that the peak reading of any emission above 1 GHz, can not exceed the average limit by more than 20 dB.

Ambient Conditions: Temperature: 20°C
Rel. Humidity: 41%

Summary of Results

Run #	Test Performed	Limit	Result	Margin
1	RE, Preliminary Scan 30 - 300 MHz		Eval	Refer to individual runs
	RE, Preliminary Scan 30 - 300 MHz		Pass	

Modifications Made During Testing:

Modifications are detailed under each run description.

Deviations From The Standard

No deviations were made from the requirements of the standard.

Conducted Emissions - Signal Ports

Test Specifics

Objective: The objective of this test session is to perform final qualification testing of the EUT with respect to the specification listed above.

Date of Test: 7/25/01
Test Engineer: Elijah G.
Test Location: SVOATS #3

Config. Used:
Config Change:
EUT Voltage: As noted in individual test runs.

General Test Configuration

For tabletop equipment, the EUT was located on a wooden table, 40 cm from a vertical coupling plane and 80cm from the LISN. LISN Remote support equipment was located approximately 30 meters away from the test area, with all I/O connections running on top of the groundplane.

For conducted voltage emissions on unshielded signal and data leads a suitable ISN was placed in series with the cable from the port under test and 80cm from the device under test. Where no suitable ISN was available, a voltage probe meeting the requirements of CISPR 22: 1997 and EN 55022: 1998 was used.

Ambient Conditions: Temperature: ??°C
Rel. Humidity:

Summary of Results

Run #	Test Performed	Limit	Result	Margin

Summary of Results

Run #	Test Performed	Limit	Result	Margin
1	CE, AC Power 230V/50Hz	EN55022 A	Pass	-2.9dB @ 2.5036MHz
2	CE, AC Power 120V/60Hz	EN55022 A	Pass	-4.4dB @ 2.5001MHz

Modifications Made During Testing:

No modifications were made to the EUT during testing

Deviations From The Standard

No deviations were made from the requirements of the standard.

Conducted Emissions - Power Ports

Test Specifics

Objective: The objective of this test session is to perform engineering evaluation testing of the EUT with respect to the specification listed above.

Date of Test: 7/24/01
Test Engineer: Mark Hill
Test Location: 3m Lab

Config. Used:
Config Change:
EUT Voltage: Refer to individual run

General Test Configuration

For tabletop equipment, the EUT was located on a wooden table 80cm from the LISN. Remote support equipment was located approximately 5 meters away from the test area, with all I/O connections running on top of the groundplane.

Ambient Conditions:

Temperature: ??°C
Rel. Humidity:

Summary of Results

Run #	Test Performed	Limit	Result	Margin
See Below	CE, AC Power	EN55022 B	Eval	

Modifications Made During Testing:

No modifications were made to the EUT during testing

Deviations From The Standard

No deviations were made from the requirements of the standard.
