TABLE OF CONTENTS

GENERAL INFORMATION REQUIRED
FOR TYPE ACCEPTANCE

- 2.1033 (c)(1)(2) TECNET GLOBAL CORPORATION will sell the
FCC ID: PT9SDU-2000 UHF transceiver in quantity,
for use under FCC RULES PART 22 & 90.
- 2.1033 (c) TECHNICAL DESCRIPTION
- 2.1033 (3) User Manual See Exhibit 3
MODELS SDU-2000 AND TNET-44 SHARE THE SAME USERS MANUAL

- 2.1033 (4) Type of Emission: 20K0F2D For 25 kHz
10K0F2D For 12.5 kHz

For 25 kHz

$$B_n = 2M + 2DK$$

$$M = 19,200 \text{ Bits per second}$$

$$D = 0.4 \text{ kHz (Peak Deviation)}$$

$$K = 1$$

$$B_n = 2(19,200/2) + 2(10.4k)(1) = 19.2k + 0.8k = 20.0K$$

ALLOWED AUTHORIZED BANDWIDTH = 20.00 kHz.

For 12.5 kHz

$$B_n = 2M + 2DK$$

$$M = 9600 \text{ Bits per second}$$

$$D = 0.825 \text{ kHz (Peak Deviation)}$$

$$K = 1$$

$$B_n = 2(9.6/2) K + 2(0.825k)(1) = 9.6k + 1.65k = 11.25 k$$

ALLOWED AUTHORIZED BANDWIDTH = 11.25 kHz.

90.209(b)(5)

- 2.1033 (5) Frequency Range: 450-470 MHz
- (6) Power Range and Controls: There are NO user Power controls.
- (7) Maximum Output Power Rating: 4.5 Watts ,
into a 50 ohm resistive load.
- (8) DC Voltages and Current into Final Amplifier:

POWER INPUT

FINAL AMPLIFIER ONLY

$$V_{ce} = 13.6 \text{ Volts}$$

$$I_C = 1.2A$$

$$P_{in} = 16.3 \text{ Watts}$$

$$\text{Efficiency} = 27.6\%$$

APPLICANT: TECNET GLOBAL CORPORATION

FCC ID: PT9SDU-2000

REPORT #: T:\T\TECNET\665ZAU1\665ZAU1TestReport.doc

Page 1 of 24

2.1093 RF exposure is intended to be handled during licensing by the responsible FCC bureau(s).The transmitter is intended to operate with a 10% duty cycle.

An example MPE calculation is based on continuous exposure. A Yagi antenna with a gain 6 dBd and a distance of 2 m was used.

GdB:=6 gain of ant in dB

$$G:=10^{\frac{GdB}{10}}$$

G= 3.981 gain of antenna

P :=4500 R1:=200 P is power in mW R1 is distance in cm

$$S1:=\frac{P \cdot G}{4 \pi \cdot R1^2}$$

$$M:=P \cdot G$$

$$M=1.791 \cdot 10^4$$

S1 = 0.036 Power density in mW/cm^2

Calculated maximum exposure based on OET 65.
f/300 for occupational limits. f/1500 for general public.
f was taken as 470 MHz giving 1.57 mW/cm^2 for occupational and
0.31 mW/cm^2 for general population.

2.1033 (9) Tune-up procedure. MODELS SDU-2000 and TNET-44 Share the same tuning procedure. The tune-up procedure is given in EXHIBIT 5.

2.1033(10) Complete Circuit Diagrams: The circuit diagram is included as EXHIBIT 7. The block diagram is included as EXHIBIT 6.

(11) A photograph or drawing of the equipment Identification label is shown in Exhibit 1.

2.1033(c)(12) Photographs of the equipment of sufficient clarity to reveal equipment construction and layout and label location are shown in Exhibits 1-2F.

2.1033(c)(13) For equipment employing digital modulation, a detail description of the modulation technique. This UUT uses FSK to modulate the transmitter.

2.1033(c)(14) data required for 2.1046 to 2.1057 SEE Below

2.1046(a) RF_power_output. Is measured by connecting a 50 ohm, resistive wattmeter to the RF output connector. With a nominal battery voltage of 13.6VDC, and the transmitter properly adjusted.

OUTPUT POWER = 4.5 Watts

METHOD OF MEASURING RF POWER OUTPUT

2.1047(a) MODULATION CHARACTERISTICS
NOT APPLICABLE, F2 type of emission.

2.1049 AUDIO LOW PASS FILTER
This UUT does not have a low pass filter.

2.1049 AUDIO INPUT VS MODULATION The audio frequency input vs deviation was measured in accordance with TIA/EIA Specification 603 S2.2.6.2.1 with the following Exceptions ; starting with 1000 Hz., the input was increased well beyond the deviation changing. This measurement was repeated for the band limits and any frequency deemed appropriate.

Occupied Bandwidth :

90.210 (c) For transmitters that are not equipped with an audio low pass filter pursuant to S90.211(b), the power of any emission must be attenuated below the unmodulated carrier output power as follows; (1) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5 kHz but not more than 10 kHz: At least $83 \log(f_d/5)$ dB; (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 10 kHz, but not more than 250% of the authorized bandwidth: At least $29 \log(f_d/11)$ dB or 50 dB, whichever is the lesser attenuation; (3) on any frequency removed from the center of the authorized bandwidth by more than 250% of the authorized bandwidth: At least $43 + 10 \log(P_o)$ dB.

90.210(d) Emission Mask D - 12.5 kHz channel bandwidth equipment. For transmitters designed to operate with a 12.5 kHz channel bandwidth, any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows:

(1) On any frequency from the center of the authorized bandwidth f_0 to 5.625 kHz removed from f_0 : Zero dB.

(2) On any frequency from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5.625 kHz but not more than 12.5 kHz: At least $7.27 (f_d - 2.88 \text{ kHz})$ dB.

(3) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 12.5 kHz: At least $50 + 10 \log(P)$ dB or 70 dB, whichever is the lesser attenuation. Data in the plots shows that on any frequency removed from the assigned frequency by more than 50%, but not more than 100%: At least 25 dB. On any frequency removed from the assigned frequency by more than 100%, but not more than 250%: At least 35 dB. On any frequency removed from the assigned frequency by more than 250%, of the authorized bandwidth: At least $43 + \log(P)$ dB.

Radiotelephone transmitter with modulation limiter.

Test procedure: TIA/EIA-603 para 2.2.11 , with the exception that various tones were used.

2.1051 Spurious emissions at antenna terminals(conducted):

Data on the following page shows the level of conducted spurious responses. The carrier was modulated 100% using a 2500Hz tone. The spectrum was scanned from 0.4 to at least the 10th harmonic of the fundamental. The measurements were made in accordance with standard TIA/EIA-603.

Method of Measuring Conducted Spurious Emission

REQUIREMENTS : Emissions must be $43 + 10\log(P_o)$ dB below the mean power output of the transmitter.

For 25kHz $43 + 10\log(4.5) = 49.53$ dB

For 12.5kHz $50 + 10\log(P_o) = 56.63$ dB

Emission Frequency MHz	dB BELOW CARRIER
460.1	00.0
920.2	75.7
1380.3	95.7
1840.4	104.1
2300.6	104.4
2760.7	112.8
3220.8	110.3
3681.0	90.6
4141.41	86.5
4601.2	98.9

METHOD OF MEASUREMENT: The procedure used was TIA/EIA-603 STANDARD without any exceptions. An audio generator was connected to the UUT through a dummy microphone circuit and the output of the transmitter connected to a standard load and from the standard load through a pre-selector filter of the spectrum analyzer. The spectrum was scanned from 400 kHz to at least the tenth harmonic of the fundamental using a HP model 8566B spectrum analyzer. The measurements were made using the shielded room located at TIMCO ENGINEERING INC. 849 N.W. State Road 45 Newberry, Florida 32669.

2.1053 Field strength of spurious emissions:

NAME OF TEST: RADIATED SPURIOUS EMISSIONS

REQUIREMENTS: Emissions must be $50 + 10\log(P_o)$ dB below the mean power output of the transmitter.

$$50 + 10\log(4.5) = 56.50\text{dB}$$

TEST DATA:

Emission Frequency MHz	Ant. Polarity	Attn. dBc	Margin dB
460.10	H	0.00	0.00
920.20	H	55.93	0.25
1,380.30	v	69.76	14.08
1,840.50	v	81.63	25.95
2,300.60	v	75.55	19.87
2,760.70	h	96.87	41.19
3,220.80	v	84.20	28.52
3,681.00	v	93.50	37.82
4,141.10	v	79.38	23.70
4,601.20	h	91.65	35.97

METHOD OF MEASUREMENT: The tabulated Data shows the results of the radiated field strength emissions and attenuation calculated per TIA/EIA 603. The spectrum was scanned from 30 to at least the tenth harmonic of the fundamental. This test was conducted per TIA/EIA 603. Measurements were made at the open field test site of TIMCO ENGINEERING INC. located at 849 N.W. STATE ROAD 45, NEWBERRY, FL 32669.

Page 15 of 24

Method of Measuring Radiated Spurious Emissions

Equipment placed 80 cm above ground on a rotatable platform.

2.1055 Frequency stability:

90.213(a)(1)

Temperature and voltage tests were performed to verify that the frequency remains within the .00015%, 1.5 ppm specification limit, for 25 kHz spacing & 0.00025% for 12.5 kHz spacing and 0.0001% for 6.25 kHz spacing. The test was conducted as follows: The transmitter was placed in the temperature chamber at 25 degrees C and allowed to stabilize for one hour. The transmitter was keyed ON for one minute during which four frequency readings were recorded at 15 second intervals. The worse case number was taken for temperature plotting. The assigned channel frequency was considered to be the reference frequency. The temperature was then reduced to -30 degrees C after which the transmitter was again allowed to stabilize for one hour. The transmitter was keyed ON for one minute, and again frequency readings were noted at 15 second intervals. The worst case number was recorded for temperature plotting. This procedure was repeated in 10 degree increments up to + 50 degrees C.

Readings were also taken at minus 25% of the battery voltage of 13.6, which we estimate to be the battery endpoint.

MEASUREMENT DATA:

Assigned Frequency (Ref. Frequency): 464.599 620 MHz

TEMPERATURE_°C	FREQUENCY_MHz	PPM
REFERENCE_____	464.599 620	0.00
-30_____	464.599 915	+ 0.64
-20_____	464.599 881	+ 0.56
-10_____	464.599 925	+ 0.66
0_____	464.599 863	+ 0.52
+10_____	464.599 858	+ 0.51
+20_____	464.599 763	+ 0.31
+30_____	464.599 593	- 0.06
+40_____	464.599 445	- 0.38
+50_____	464.599 387	- 0.50

-15% Battery End-Point VDC 464.599 613 - 0.02
+15% Battery End-Point VDC 464.599 630 + 0.02

RESULTS OF MEASUREMENTS: The maximum frequency variation over the temperature range was -.50 TO +.66 ppm.

2.1055(a)(1) Frequency stability:
90.214 Transient Frequency Behavior

REQUIREMENTS: In the 450-500MHz frequency band, transient frequencies must be within the maximum frequency difference limits during the time interval indicated below for 12.5kHz Channels:

Time Interval	Maximum Frequency	UHF Radios 450-500 MHz
t1	+12.5 kHz	10.0 ms
t2	+6.25 kHz	25.0 ms
t3,t4	+12.5 kHz	10.0 mS

TEST PROCEEDURE: TIA/EIA TS603 PARA 2.2.19, the levels were set as follows;

1. Using the variable attenuator the transmitter level was set to 40dB below the test recievers maximum input level, then the transmitter was turned off.
2. With the Transmitter off the signal generator was set 20dB below the level of the transmitter in the above step, this level will be maintained with the signal generator through-out the test.
3. Reduce the attenuation between the transmitter and the RF detector by 30dB.
4. With the levels set as above the transient frequency behavior was observed & recorded.
