## 1. ATTESTATION OF TEST RESULTS

### FCC

#### Applicant Information

Company Name: Consumer Lighting (U.S.) LLC dba GE Lighting, a Savant Company  
Address: 1975 Noble Road Cleveland, Ohio 44112 United States

### FCC

#### Manufacturer Information

Company Name: Consumer Lighting (U.S.) LLC dba GE Lighting, a Savant Company  
Address: 1975 Noble Road Cleveland, Ohio 44112 United States

### ISED

#### Applicant Information

Company Name: Consumer Lighting Canada Company, dba GE Lighting, a Savant Company  
Address: 1975 Noble Road Cleveland OH 44112 United States Of America

### ISED

#### Manufacturer Information

Company Name: Consumer Lighting Canada Company, dba GE Lighting, a Savant Company  
Address: 1975 Noble Road Cleveland OH 44112 United States Of America

### EUT Information

EUT Name: Outdoor Smart Plug  
Model: CPLGOD2BLG1  
Sample Status: Normal  
Sample ID: 3102161  
Sample Received Date: June 11, 2020  
Date of Tested: June 12~19, 2020

| APPLICABLE STANDARDS |              |

| STANDARD             | TEST RESULTS |
| FCC 47CFR§2.1091     | PASS         |
| KDB-447498 D01 V06   |              |

Prepared By:

Kebo Zhang  
Project Engineer

Checked By:

Shawn Wen  
Laboratory Leader

Approved By:

Stephen Guo  
Laboratory Manager

## 2. TEST METHODOLOGY

The tests documented in this report were performed in accordance with KDB 447498 D01 General RF Exposure Guidance v06.

## 3. FACILITIES AND ACCREDITATION

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Note 1: All tests measurement facilities use to collect the measurement data are located at Building 10, Innovation Technology Park, Song Shan Lake Hi tech Development Zone, Dongguan, 523808, China

Note 2: The test anechoic chamber in UL Verification Services (Guangzhou) Co., Ltd. Song Shan Lake Branch had been calibrated and compared to the open field sites and the test anechoic chamber is shown to be equivalent to or worst case from the open field site.

Note 3: For below 30MHz, lab had performed measurements at test anechoic chamber and comparing to measurements obtained on an open field site. And these measurements below 30MHz had been correlated to measurements performed on an OFS.

## 4. REQUIREMENT

### LIMIT

Limits for General Population/Uncontrolled Exposure

| Limits for General Population/Uncontrolled Exposure                                                                                                                                                                                                                                              |                                   |                                   |                                         |                                                                   |

| 1500-100,000                                                                                                                                                                                                                                                                                     | --                                | --                                | 1.0                                     | 30                                                                |
| Note 1: f = frequency in MHz, * means Plane-wave equivalent power density                                                                                                                                                                                                                        |                                   |                                   |                                         |                                                                   |
| Note 2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure. |                                   |                                   |                                         |                                                                   |
| Note 3: The limit value 1.0mW/cm <sup>2</sup> is available for this EUT.                                                                                                                                                                                                                         |                                   |                                   |                                         |                                                                   |

### MPE CALCULATION METHOD

$$S = PG / (4\pi R^2)$$

where: S = power density (in appropriate units, e.g. mW/ cm<sup>2</sup>)

P = power input to the antenna (in appropriate units, e.g., mW)

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm)

## **CALCULATED RESULTS**

### Radio Frequency Radiation Exposure Evaluation

| WIFI 2.4G (Worst case) |            |                   |       |                        |       |
|------------------------|------------|-------------------|-------|------------------------|-------|
| Operating Mode         | Max. Power | Max. Antenna Gain |       | Power density          | Limit |
|                        | (dBm)      | (dBi)             | (num) | (mW/ cm <sup>2</sup> ) |       |
| BLE                    | 9          | 1.65              | 1.46  | 0.00231                | 1     |
| 2.4G wifi              | 17         | -1.6              | 0.69  | 0.00690                | 1     |

Note:

1. The calculated distance is 20cm.
2. WLAN 2.4G & BLE can transmit simultaneously.  
BT+WIFI 2.4GHz=0.00231+0.0069 =0.00921 (mW/ cm<sup>2</sup> )
3. Therefor the maximum calculations of above situations are less than the “1” limit.

**END OF REPORT**
