

**RF-exposure**

The device with FCC ID: PVJ-410000409 uses a helix type antenna intended for the 2.4 Ghz band. The equivalent isotropically radiated power (EIRP) is 1 mW and the power density, calculated as  $S = \text{EIRP} / (4 \cdot \pi \cdot R^2)$  at  $R = 0.2 \text{ m}$ , is  $2 \text{ mW/m}^2$ . The maximum permissible exposure (MPE) from this device is below the limit for general population use,  $10 \text{ W/m}^2$ .
