RE: Hafele America Co.

FCC ID: PW3112

I have a few comments on the above referenced Application.

EMC Report

- 1) Some external photographs show 3 ferrites, while other photos show 4, for the same model device. The test report states that ferrites were not placed on the external antenna cables, however some photos appear to show this. Please explain.
- 2) Please explain how the manufacturer currently plans to implement the ferrites. Typically the FCC does not allow the end user to install the ferrites, but requires them to be molded into the cables. Are the cables provided?
- 3) An updated attestation exhibit, including new modifications does not appear to have been provided. Please provide.
- 4) It appears that the models tested do not include some of the optional connections shown in the component placement diagram (S3 & S5). It does not appear that worse case samples have been tested. Please explain.
- 5) The limits in table 5.1a and 5.1c are correct for measurements up through 408.9 kHz. However, the limits above this frequency are actually shown in uV/m instead of dBuV/m and therefore affects the results. Please correct.

Timothy R. Johnson  
Examining Engineer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
