The brief circuit description is listed as follows:

- U1 and associated circuit act as encoder.
- XL1, Q1 and associated circuit act as an oscillator.
- Q2 and associated circuit act as RF amplifier.
- Q1, Q2, Q3 and associated circuit act as a battery charger for receiver.

## **TEST REPORT**

Report No. : AJ038213-001

Date : 2007 December 12

### **2 Description of the radiated emission test**

#### **2.1 Test Procedure**

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

The device was rotated through three orthogonal axes to determine which attitude and configuration produce the highest emission during measurement.

#### **2.2 Test Result**

Peak Detector data was measured unless otherwise stated.

“#” means emissions appearing within the restricted bands shall follow the requirement of section 15.205.

It was found that the EUT meet the FCC requirement.

## **TEST REPORT**

Report No. : AJ038213-001

Date : 2007 December 12

### **3 Description of the Line-conducted Test**

#### **3.1 Test Procedure**

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. The EUT was setup as described in the procedures, and both lines were measured.

#### **3.2 Test Result**

No measurement is required as the EUT is a battery-operated product.

#### **3.3 Graph and Table of Conducted Emission Measurement Data**

### **5 Supplementary document**

The following document were submitted by applicant, and for electronic filing, the document are saved with the following filenames:

<b>Document</b>	<b>Filename</b>
ID Label/Location	LabelSmp.jpg
Block Diagram	BlkDia.pdf
Schematic Diagram	Schem.pdf
Users Manual	UserMan.pdf
Operational Description	OpDes.pdf

#### **5.1 Bandwidth**

The plot saved in TestRpt2.pdf shows the fundamental emission is confined in the specified band. It also shows that the band edge met the 15.209 requirement at 26.9599 and 27.2801MHz.

#### **5.2 Duty cycle**

The duty cycle is simply the on-time divided by the period:

$$\text{The duration of one cycle} = 57.0\text{ms}$$

$$\begin{aligned}\text{Effective period of the cycle} &= 1.79\text{ms} \times 4 + 0.59\text{ms} \times 40 \\ &= 30.76\text{ms}\end{aligned}$$

$$\begin{aligned}\text{Duty Cycle} &= 30.76 / 57.0 \\ &= 0.54\end{aligned}$$

Therefore, the average factor is found by  $20\log_{10} 0.54 = -5.4\text{dB}$

#### **5.3 Transmission time**

#### **5.4 Power Spectral Density**

Not Applicable
