

APPLICANT: **Sinoart LTD.**

FCC ID: PXEML-1804TX

Circuit Description

U1 the encoder it generate the stop and play encoded signal , that signal drive into the base of (Q1) it form a pulse modulation . The output of Q1 oscillator has the turning network consisting of L1 (PCB antenna), C3, C4, VC and antenna go to the output stage.

Antenna, Ground, and Power Source

The antenna is on the PCB trace. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 6 Volt primary storage cell.
