Hi Tom

I have reviewed the information you sent. There are a couple items. First, you provided the schematics (thanks) however, you did not provide a letter requesting confidentiality. If I issue the grant, I would have to upload the schematics in a non-confidential manner until a request for confidentiality for the schematics was provided. I thought it better to get the letter first. As agent, you can write the letter specifying under 0.457 and 0.459 that you request confidentiality on the schematics and block/clock diagrams. Let me know.

ANSWER: We sent a request in the original submission which I attach here. The schematics are the only document that needs confidentiality.

Second, the manual gives a separation distance of 20cm then states 6 inches. This is obviously a typo, but needs correcting. The FCC is kinda picky about MPE separation distances and such. The statement should be 20cm (8 inches).

ANSWER: I attach a revised manual.

Third, (thanks for providing the missing sections) but the statement in the manual, "Do not use substitute parts or perform any unauthorized modification of equipment. This will void your warranty and may create an unworkable condition." does not address the requirements of 15.21 Information to the user. The statement must clearly inform the user that unauthorized modifications may void the users right to use the equipment. The FCC is not really interested if a warranty is voided or not, they are only interested in the user being informed that unauthorized modifications may void the right to use the equipment because it voids the ID fo the device. Generally it is just easier to cut and paste the words from 15.21(The users manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for

compliance could void the user's authority to operate the equipment.). In any case, an appropriate non-modification statement must be in the manual.

ANSWER: This has been corrected in the attached manual.

I can issue the grant as soon as I have the above questions answered.
Thanks
Dennis
