

Ref: NetGear, Inc (FCC ID: PY3HE102)

Dear Bill,

In response to the comments made on November 28, 2001 regarding NetGear, Inc (FCC ID: PY3HE102), please see my responses below:

1.) *Please note label must appear on module. Correct and submit new label location information.*

This has been done. The new file is named *label and location - Revised.pdf*

2.) A letter itemizing all the various parameters satisfied for this module approval was not submitted. Please correct.

The page from the report has been extracted and uploaded as a separate document

3.) The antenna listed in the RF Exposure section identifies this as a 6dBi monopole. This seems a bit high. Could you please confirm from manufacturer, or measure antenna gain.

The antenna manufacturer confirms that the gain of the antenna is 6dBi, despite its appearance !

Please also note that the name of the device is now "802.11a Wireless AP module". As this does not affect any of the information in the Form 731 I am not sending you a revised for 731. The FRN for Netgear is **0005-0491-68**

Hopefully the above answers all of your concerns. If not, please respond to doc@elliottlabs.com with any further questions.

Regards,

Mark Briggs
Director of Engineering
