1.7 TEST RESULTS

The requirements of this test document are fulfilled by the equipment under test. The complete test results are presented in the following.

TEST REPORT REFERENCE: E51079A Edition 1

2 TECHNICAL DATA OF EQUIPMENT

2.1 DEVICE UNDER TEST

Type of equipment:	RFID cover for NOKIA mobile phone 3220
Type designation:	CC-239D
Serial No.:	-
Highest internal frequency:	27.12 MHz
Antenna type:	Integral

The following external I/O cables were used:

Cable	Length	Shielding	Connector
AC / DC adaptor (to the charger of the mobile phone)	1.8 m	No	3.5 mm jack plug
-	-	-	-
-	-	-	-
-	-	-	-
-	-	-	-

2.2 PEREPHERY DEVICES

The following equipment was used as control unit and ancillary equipment:

During all radiated measurements the EUT was connected to a NOKIA mobile phone model 3220, type RH-37, Serial number 353779/00/126015/9. For measurements under extreme conditions the NOKIA mobile phone model 3220, type RH-37, Serial number 355387/00/704162/9 was used. The charger of the mobile phone was connected to an AC / DC adaptor type ACP12E, which was connected to an AC-mains network with 115 V AC/ 60 Hz.

2.3 SPECIAL EMC MEASURES

The following EMC measures were necessary to reach the documented results:

None

TEST REPORT REFERENCE: E51079A Edition 1

3 OPERATIONAL STATES AND PHYSICAL BOUNDARIES

The battery of the mobile phone supplies the EUT in any case. In charging mode the battery is buffered by the AC / DC adaptor. For this reason the voltage variation was carried out within the supply voltage range, in which the mobile phone still operates. This range was 3.145 V DC to 4.23 V DC.

For measurements carried out with a test fixture (frequency error and occupied bandwidth) the mobile phone was supplied by an external power supply instead the mobile phone battery.

The mobile phone and the charger were already tested and not subject of this test report.

All measurements were carried out with a test-software, which set the RFID cover in a continuous operation mode with the maximum modulation rate, because pretests have shown that this mode produces the highest emissions. With this test software no GSM-link was necessary. The mobile phone receiver was not in use during the measurements

For the whole frequency range a preliminary measurement in a fully anechoic chamber with a measuring distance of 3 m was carried out to determine the frequencies, which were radiated by the EUT. The final measurements on the detected frequencies were carried out on an outdoor test site without ground plane (for the frequency range 9 kHz to 30 MHz) and on an open area test site with ground plane (for the frequency range 30 MHz to 1 GHz).

The physical boundaries of the Equipment Under Test are shown below.

Physical boundary of the CC-239D

TEST REPORT REFERENCE: E51079A Edition 1

4 LIST OF TEST MODULES

4.1 EMISSION

Radiated emissions FCC 47 CFR Part 15 section 15.209 [2]						
No.	Application	Frequency range	Limits (microvolts/meter)	Reference standard	Remark	Status
1	Intentional radiator	0.009 to 0.49 MHz 0.490 to 1.705 MHz 1.705 to 30.0 MHz 30 to 88 MHz 88 to 216 MHz 216 to 960 MHz 960 to 1000 MHz	2400/f(kHz) at 300 m 24000/f(kHz) at 30 m 30.0 dB μ V/m at 30 m 40.0 dB μ V/m at 3 m 43.5 dB μ V/m at 3 m 46.0 dB μ V/m at 3 m 54.0 dB μ V/m at 3 m	ANSI C63.4 (2003);	-	Passed
Radiated emissions FCC 47 CFR Part 15 section 15.225 (a)[2]						
No.	Application	Frequency range	Limits (microvolts/meter)	Reference standard	Remark	Status
2	Operation within the band 13.553 – 13.567 MHz	13.553 - 13.567 MHz	15,848 at 30 m	ANSI C63.4 (2003);	-	Passed
Radiated emissions FCC 47 CFR Part 15 section 15.225 (b)[2]						
No.	Application	Frequency range	Limits (microvolts/meter)	Reference standard	Remark	Status
3	Operation within the bands 13.410 – 13.553 MHz and 13.567 – 13.710 MHz	13.410 - 13.553 MHz and 13.567 - 13.710 MHz	334 at 30 m	ANSI C63.4 (2003);	Not carried out, because the carrier is already below these limits.	Passed
Radiated emissions FCC 47 CFR Part 15 section 15.225 (c)[2]						
No.	Application	Frequency range	Limits (microvolts/meter)	Reference standard	Remark	Status
4	Operation within the bands 13.110 – 13.410 MHz and 13.710 – 14.010 MHz	13.110 - 13.410 MHz and 13.710 - 14.010 MHz	106 at 30 m	ANSI C63.4 (2003);	Not carried out, because the carrier is already below these limits.	Passed
Frequency tolerance over temperature and supply voltage FCC 47 CFR Part 15 section 15.225 (e)[2]						
No.	Application		Limits	Reference standard	Remark	Status
5	Temperature range -20°C to +50°C and supply voltage 85 to 115 % or new battery		0.01 %	ANSI C63.4 (2003);	-	Passed

TEST REPORT REFERENCE: E51079A Edition 1

5 METHOD OF MEASUREMENT

5.1 RADIATED EMISSIONS 9 kHz to 30 MHz

The radiated emission measurement is divided into two stages.

Preliminary measurement:

In the first stage a preliminary measurement will be performed in a shielded room with a measuring distance of 3 meters. Tabletop devices will set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices will be placed directly on the turntable/ground plane. The set up of the Equipment under test will be in accordance to ANSI C63.4-2003 [1].

The frequency range 9 kHz to 30 MHz will be monitored with a spectrum analyser while the system and its cables will be manipulated to find out the configuration with the maximum emission levels if applicable. The EMI Receiver will be set to MAX Hold mode. The EUT and the measuring antenna will be rotated around their vertical axis to found the maximum emissions.

The resolution bandwidth of the spectrum analyser will be set to the following values:

Frequency range	Resolution bandwidth
9 kHz to 150 kHz	200 Hz
150 kHz to 30 MHz	10 kHz

TEST REPORT REFERENCE: E51079A Edition 1

Preliminary measurement procedure:

Prescans were performed in the frequency range 9 kHz to 150 kHz and 150 kHz to 30 MHz.

The following procedure will be used:

- 1) Monitor the frequency range at horizontal polarisation and a EUT azimuth of 0 °.
- 2) Manipulate the system cables within the range to produce the maximum level of emission.
- 3) Rotate the EUT by 360 ° to maximize the detected signals.
- 4) Make a hardcopy of the spectrum.
- 5) Measure the frequencies of highest detected emission with a lower span and resolution bandwidth to increase the accuracy and note the frequency value.
- 6) Repeat steps 1) to 4) with the other orthogonal axes of the EUT.
- 7) Rotate the measuring antenna and repeat steps 1) to 5).

Final measurement:

In the second stage a final measurement will be performed on an open area test site with no conducting ground plane in a measuring distances of 3 m, 10 m and 30 m. In the case where larger measuring distances are required the results will be extrapolated based on the values measured on the closer distances according to Section 15.31 (f) (2) [2]. The final measurement will be performed with a EMI Receiver set to Quasi Peak detector except for the frequency bands 9 kHz to 90 kHz and 110 kHz to 490 kHz where an average detector will be used according Section 15.209 (d) [2].

On the during the preliminary measurement detected frequencies the final measurement will be performed while rotating the EUT and the measuring antenna in the range of 0 ° to 360 ° around their vertical axis until the maximum value is found.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
9 kHz to 150 kHz	200 Hz
150 kHz to 30 MHz	9 kHz

TEST REPORT REFERENCE: E51079A Edition 1

Final measurement procedure:

The following procedure will be used:

- 1) Monitor the frequency range with the measuring antenna at vertical orientation parallel to the EUT at an azimuth of 0 °.
- 2) Rotate the EUT by 360 ° to maximize the detected signals and note the azimuth and orientation.
- 3) Rotate the measuring antenna to find the maximum and note the value.
- 4) Rotate the measuring antenna and repeat steps 1) to 3) until the maximum value is found.
- 5) Repeat steps 1) to 4) with the other orthogonal axes of the EUT if applicable (handheld equipment).

5.2 RADIATED EMISSIONS 30 MHz to 1 GHz

The radiated emission measurement is divided into two stages.

Preliminary measurement:

In the first stage a preliminary measurement will be performed in a fully anechoic chamber with a measuring distance of 3 meter. Tabletop devices will set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices will be placed directly on the turntable/ground plane. The set up of the Equipment under test will be in accordance to ANSI C63.4-2003 [1].

The frequency range 30 MHz to 1 GHz will be measured with an EMI Receiver set to MAX Hold mode and a resolution bandwidth of 100 kHz. The measurement will be performed in horizontal and vertical polarisation of the measuring antenna and while rotating the EUT in its vertical axis in the range of 0 ° to 360 °.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
30 MHz to 1 GHz	100 kHz

TEST REPORT REFERENCE: E51079A Edition 1

Procedure preliminary measurement:

Prescans were performed in the frequency range 30 MHz to 230 MHz and 230 MHz to 1 GHz.

The following procedure will be used:

1. Monitor the frequency range at horizontal polarisation and a EUT azimuth of 0 °.
2. Manipulate the system cables within the range to produce the maximum level of emission.
3. Rotate the EUT by 360 ° to maximize the detected signals.
4. Make a hardcopy of the spectrum.
5. Measure the frequency of 3 highest detected emissions with a lower span and resolution bandwidth to increase the accuracy and note the frequency value.
6. Repeat steps 1) to 4) with the other orthogonal axes of the EUT.
7. Repeat steps 1) to 5) with the vertical polarisation of the measuring antenna.

Final Measurement:

In the second stage a final measurement on an open area test site will be performed on selected frequencies found in the preliminary measurement. During this test the EUT will be rotated in the range of 0 ° to 360 °, the measuring antenna will be set to horizontal and vertical polarisation and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
30 MHz to 1 GHz	120 kHz

TEST REPORT REFERENCE: E51079A Edition 1

Procedure final measurement:

The following procedure will be used:

- 1) Measure on the selected frequencies at an antenna height of 1 m and a EUT azimuth of 23 °.
- 2) Move the antenna from 1 m to 4 m and note the maximum value at each frequency.
- 3) Rotate the EUT by 45 ° and repeat 2) until an azimuth of 337 ° is reached.
- 4) Repeat 1) to 3) for the other orthogonal antenna polarization.
- 5) Move the antenna and the turntable to the position where the maximum value is detected.
- 6) Measure while moving the antenna slowly +/- 1 m.
- 7) Set the antenna to the position where the maximum value is found.
- 8) Measure while moving the turntable +/- 45 °.
- 9) Set the turntable to the azimuth where the maximum value is found.
- 10) Measure with Final detector (QP or AV) and note the value.
- 11) Repeat 5) to 10) for each frequency.
- 12) Repeat 1) to 11) for each orthogonal axes of the EUT if handheld equipment.

5.3 FREQUENCY STABILITY WITH RESPECT TO AMBIENT TEMPERATURE AND SUPPLY VOLTAGE

The following procedure will be used:

- 1) Place the EUT in the climatic chamber.
- 2) Switch on the EUT and check the correct function and the settings of the spectrum analyser.
- 3) Switch off the EUT and tune the climatic chamber to a temperature of 50 °C. Wait until the thermal balance is obtained.
- 4) Switch the EUT on and record the frequencies at start-up and 2, 5 and 10 minutes after powering on.
- 5) Repeat 4) with the minimum and the maximum of the supply voltage.
- 6) Switch off the EUT and tune the climatic chamber to a temperature range of 50 °C to –20 °C in ten-degree steps. Wait until the thermal balance is obtained for every step.
- 7) Switch the EUT on and record the frequencies at start-up and 2, 5 and 10 minutes after powering on.
- 8) Repeat 7) with the minimum and the maximum of the supply voltage.
- 9) Repeat 6) with the next temperature step until –20 °C were reached.

TEST REPORT REFERENCE: E51079A Edition 1

6 TEST RESULTS EMISSION TEST

6.1 PRELIMINARY RADIATED EMISSION TEST (9 kHz to 30 MHz)

Ambient temperature	21 °C	Relative humidity	40 %
---------------------	-------	-------------------	------

- Position of EUT: The EUT was set-up on a non-conducting table of a height of 0.8 m. The distance between EUT and antenna was 3 m.
- Cable guide: The cable of the mobile phone was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report.
- Test record: The test was carried out in test mode of the EUT (transmit mode with modulation). All results are shown in the following.
- Remark: The emissions found around 2.5 MHz caused temporary by the charging circuit of the mobile phone with high interval times. The emissions found at 15.5 kHz, 31 kHz, 47.9 kHz and 62.5 kHz caused by the measuring system and not by the EUT.

51079_1.wmf: Spurious emissions from 9 kHz to 150 kHz:

TEST EQUIPMENT USED THE TEST:

29, 31 – 33, 56

TEST REPORT REFERENCE: E51079A Edition 1

51079 2.wmf: Spurious emissions from 150 kHz to 1 MHz:

51079 3.wmf: Spurious emissions from 1 MHz to 30 MHz:

No emissions found in and outside the restricted bands.

The following frequency was found inside the 13.533 to 13.567 MHz band according to FFC 47 CFR Part 15 section 15.225 [2]:

13.560 MHz.

This frequency has to be measured on the outdoor test site. The result of this final measurement is shown in subclause 6.3 of this test report.

TEST REPORT REFERENCE: E51079A Edition 1

6.2 PRELIMINARY RADIATED EMISSION TEST (30 MHz to 1 GHz)

Ambient temperature	21 °C	Relative humidity	40 %
---------------------	-------	-------------------	------

Position of EUT: The EUT was set-up on a non-conducting table of a height of 0.8 m. The distance between EUT and antenna was 3 m.

Cable guide: The cable of the mobile phone was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report.

Test record: The test was carried out in test mode of the EUT (transmit mode with modulation). All results are shown in the following.

51079_5.wmf: Spurious emissions from 30 MHz to 230 MHz:

TEST REPORT REFERENCE: E51079A Edition 1

51079 6.wmf: Spurious emissions from 230 MHz to 1 GHz:

No significant frequencies above the noise floor of the system were found during the preliminary radiated emission test, so no measurements were carried out the open area test site.

TEST EQUIPMENT USED FOR THE TEST:

29, 31 - 35, 43

TEST REPORT REFERENCE: E51079A Edition 1

6.3 FINAL RADIATED EMISSION TEST (9 kHz to 30 MHz)

Ambient temperature	17 °C	Relative humidity	51 %
---------------------	-------	-------------------	------

Position of EUT: The EUT was set-up on a non-conducting table of a height of 0.8 m. The distance between EUT and antenna was 30 m.

Cable guide: The cable of the mobile phone was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report.

Test record: The test was carried out in test mode of the EUT (transmit mode with modulation). All results are shown in the following.

Supply voltage: The EUT was supplied with 12 V DC and 5 V DC via suitable AC/DC adaptors.

Test results: The test results were calculated with the following formula:

$$\text{Result [dB}\mu\text{V/m]} = \text{reading [dB}\mu\text{V]} + \text{antenna factor [dB/m]}$$

Results with measuring distance of 3 m						
Frequency MHz	Result dB μ V/m	Limit dB μ V/m	Margin dB	Detector	Readings dB μ V	Antenna factor * dB/m
13.560	39.4	124.0	84.6	QP	19.4	20.0
Results with measuring distance of 10 m						
Frequency MHz	Result dB μ V/m	Limit dB μ V/m	Margin dB	Detector	Readings dB μ V	Antenna factor * dB/m
13.560	24.5	104.0	79.5	QP	4.5	20.0
Results with measuring distance of 30 m						
Frequency MHz	Result dB μ V/m	Limit dB μ V/m	Margin dB	Detector	Readings dB μ V	Antenna factor * dB/m
13.560	No result above the noise floor of the system					

*: Cable loss included

Test: Passed

TEST EQUIPMENT USED FOR THE TEST:

55 – 57

TEST REPORT REFERENCE: E51079A Edition 1

6.4 OCCUPIED BANDWIDTH

Ambient temperature:	21 °C	Relative humidity:	40 %
----------------------	-------	--------------------	------

Test set-up: For this test the test set-up from the preliminary emission measurement test set-up was used.

Cable guide: The cable of the EUT was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report, because the same test set-up as for the frequency error was used.

Supply voltage: The EUT was supplied with 3.7 V DC by an external power supply instead of the mobile phone battery.

Test record: The test was carried out in test mode of the EUT (transmit mode with modulation). All results are shown in the following.

51079bw.hgl: Occupied bandwidth:

F_L	F_U	BW ($F_U - F_L$)
13.346667 MHz	13.773889 MHz	427.222 kHz

TEST EQUIPMENT USED THE TEST:

22, 58, 59

TEST REPORT REFERENCE: E51079A Edition 1

6.5 FREQUENCY TOLLERANCE

Ambient temperature	20 °C	Relative humidity	39 %
---------------------	-------	-------------------	------

Supply voltage: 4.230 V DC

Temperature:	Minutes after switch on	Frequency:	Allowed tolerance:	Measured tolerance:	Result:
50 °C	0	13.560272 MHz	± 1.35 kHz	-44 Hz	Passed
	2	13.560300 MHz	± 1.35 kHz	-16 Hz	Passed

	10	13.560350 MHz	± 1.35 kHz	+28 Hz	Passed

Conclusion: The maximum frequency error with a supply voltage of 3.145 V DC was +39 Hz, which is equal to an error of + 0.0003 %.

Test result: Passed

TEST EQUIPMENT USED FOR THE TEST:

22, 54, 58, 59, 61
