

January 29, 2009

The Digital Satellite Receiver is USB port is used only for connection of memory drives.

- That the device will only work with USB connected storage media.
- That the device will not be recognized by the Windows/Linux/other operating systems of a standard PC and that no drivers are available which would support such a configuration.
- How the "restriction to operation of the EUT with only the above defined devices has been implemented.

Sincerely,

Hyung-In, Kim

Mr. Hyung-In, Kim / General Manager
