

OVERVIEW

Hörmann-32-Bit fixed code – 390,0 MHz – Transmitters - - Design „Hörmann“

Name	Art.-No.	Brief description / functions	Distinguishing marks	Remarks
HS2	437502	hand transmitter with 2 buttons „standard“; able to learn and to be recorded/resetted; 12V battery „23A“	- Big housing - 2 buttons soldered on PCB	with holder and adhesive pad 3 x 3 cm
HS4	437503	hand transmitter with 4 buttons „standard“; able to learn and to be recorded/resetted; 12V battery „23A“	- Big housing - 4 buttons soldered on PCB	with holder and adhesive pad 3 x 3 cm
HSM2	437504	hand transmitter with 2 buttons „mini“; able to learn and to be recorded/resetted; 12V battery „23A“	- Small housing - 2 buttons soldered on PCB	with key ring
HSM4	437505	hand transmitter with 4 buttons „mini“; able to learn and to be recorded/resetted; 12V battery „23A“	- Small housing - 4 buttons soldered on PCB	with key ring

Differences:

Types HS4 and HSM4 has 4 buttons. On type HS2 and HSM2 only 2 buttons are soldered on the PCB. Also exist 2 types of housings. HSM2 and HSM4 has small housings. HS2 and HS4 use the bigger version. All technical details like electronic components, placements, PCB, .. are identical.
