- Never connect the positive and negative terminals of the battery with a wire or other metallic materials.
- Do not carry or store the battery together with ballpoint pens, necklaces, coins, hairpins, or anything else metallic.
- Never burn or heat up the battery.
- Do not use or leave the battery in places where there is excessively high temperature (60°C or higher) such as near fire or heater.
- Do not use or store the battery in places exceeding the service or storage temperature.
- Never place the battery into or soak it in water or seawater.
- Never charge the battery near a fire or anywhere exposed to direct sunlight. If the battery becomes hot, protective device may be activated, which may cause the insufficient recharging, damage to the protective device, heat emission, rupture, or fire of the device.
- Never charge or use the battery where any inflammable gases may be emitted.
- If the battery is exposed to extremely low pressure, it may explode or leak flammable liquids or gases.
- Never apply solder directly to the battery.
- Do not use batteries other than the specified ones.

WARNING

Alerts you to those conditions which could cause serious bodily injury or death if the instructions are not followed correctly.

Handling the BHT

Incorrect handling of the BHT could cause electric shock, impaired vision, skin problems, injury, burns and generation of heat and smoke from the BHT. Be sure to observe the following to use the device correctly.

- Never disassemble or modify the BHT.
- Do not let the battery undergo any shock or impact or throw it at something hard.
- When the BHT is subject to the strong impact, for example, a drop impact, check the case for any damage and the battery for damage and leakage. Never use a damaged case. Never use a damaged or leaked battery. If battery fluid leaks from the battery and it gets into your eyes, rinse

them with clean water thoroughly without rubbing and consult a doctor as soon as possible.

Otherwise, you may damage your eyes.

- Do not insert any foreign materials into inside.
- Do not get the BHT wet or put it in water or seawater.
- Never put the BHT in a microwave oven or high-pressure container. Never put it on the induction cooktop.
- Never put the BHT in places where there are excessively high temperatures, such as inside closed-up automobiles, or in places exposed to direct sunlight.
- Avoid using the BHT in extremely humid or dusty areas, or where there are drastic temperature changes.
- If smoke, abnormal odor or noise comes from the BHT, immediately turn off the power and remove the battery cartridge from the BHT.
- If the LCD screen is broken by mistake, care must be taken not to get the liquid crystal into your eyes or mouth or drop it on your skin.
- Be careful of broken glass if the LCD screen is accidentally cracked or broken. It may cause bodily injury.
- If the LCD screen is broken by mistake, care must be taken not to get the liquid crystal into your eyes or mouth or drop it on your skin. Be careful of broken glass if the LCD screen is accidentally cracked or broken. It may cause bodily injury, if the liquid leaks out from the broken LCD.
- Do not look into the light source from the reading window or do not point the reading window at other people's eyes. Eyesight may be damaged by direct exposure to this light.

Storing the battery

- Remove the battery from BHT, or charger and store at cool and dry place, when you don't use your BHT for an extended period of time.
 - Check the condition of battery on the following points before you store it for a long time:
 - If the battery is full charged (a state right after charge is completed), and
 - If the remaining battery level is very low (there is not enough power left to activate BHT).Long-term storage under these conditions may deteriorate the performance and life of the battery. You are recommended to ensure that the battery is at least at the  charge level required for long-term storage.
- In addition, even you don't use the battery for a long term, keep this power level by recharging once a year in order to maintain the battery performance.
- The battery may swell over the years.

This is a natural characteristic of a lithium-ion battery and is not safety hazard. Nevertheless, replacing the battery sooner is recommended.

Handling battery

Failure to follow all instructions listed below may cause electrical shock, overheating, smoking, fire, rupture, or leakage.

- The battery is exclusively for the BHT. Do not use the battery for purposes other than charging the BHT.
- To charge the battery, be sure to use the specified charger, the charging cable.
- The battery may be warm immediately after charging or use.
- If abnormal odor, heat, discoloration, deformation or any other abnormal conditions are noticed when the battery is in use, being charged, or is in storage, remove it from the BHT or charger and avoid further use.
- If the battery does not finish recharging within the specified time, stop recharging.
- Battery life is when the BHT becomes available for less time even after a properly charged battery is loaded. Please purchase a new battery.

1.7 Usage Precautions

1.7.1 Usage environment restrictions

- Do not use the BHT where it may be exposed to fire, high temperatures, or direct sunlight.
(Failure to observe this may result in damage, overheating, rupture, or fire.)
- When the BHT is stored in a high-temperature, high-humidity environment of 50 - 60°C, leave to sit in a location at room temperature and normal humidity for at least 1 day prior to use.
Failure to observe this may cause a reading failure or damage the BHT.
- Do not use the BHT in places with extreme temperature variations.
(Failure to observe this may lead to BHT malfunction due to condensation.)
Leave the BHT for a short while prior to use when moved from a cold to a warm environment.
- Do not use the BHT in places where it may be exposed to strong impact or significant static electricity.

1.7.2 Keep the BHT away from electromagnetic waves and metallic objects.

Wireless communication may not be possible in the following locations and using.

- In the vicinity of the following devices operating on a 2.4 GHz waveband
(Communication may not be possible due to electromagnetic interference.)
 - Industrial, scientific, or medical equipment such as microwave ovens
 - Wireless LAN devices
 - Logistics systems in places such as plants or warehouses
 - Wireless devices such as amateur radio stations
- In the vicinity of household appliances emitting electromagnetic waves such as computers or televisions (Communication may not be possible due to electromagnetic noise.)
- In the vicinity of metallic objects, in places with high levels of metallic dust, or in places surrounded by metal walls (Communication may not be possible due to the presence of metallic objects.)

Putting on any metallic objects around the antenna. Placing your hand over the antenna

Requests to system designers

- Make sure that the environment is free of the interference factors and capable of wireless communication before actual use.
- Use a program capable of retransmitting data if communication fails.
- Make sure that the BHT communicates properly with all equipment in the environment where other equipment using the 2.4 GHz band is already operated or newly added to the existing system.
- If the environment changes (e.g., newly installed household appliances and movement or addition of shelves or objects), make sure that the BHT communicates properly with all equipment again before actual use.

1.8 Proper Care of the BHT

Make sure to turn OFF the BHT before cleaning.

- Terminal dirt on the BHT and battery
Periodically wipe any dirt from the terminals of the BHT and battery with a cotton swab or similar soft object. Be sure not to scratch or deform the terminals while cleaning.
Never use organic solvents such as thinner or alcohol, as this may cause terminal plating to be peeled off.
- Housing dirt
Wipe any dirt from the housing with a dry, soft cloth.
If excessively dirty, wipe with a soft cloth that has been soaked in soapy water (always use a neutral detergent) and wrung out thoroughly.
Never use organic solvents such as thinner or alcohol, as this may cause the housing to be marred or paint to be peeled off.
- LCD screen dirt
Never rub or strike the LCD screen with anything hard, as this may result in scratches on the screen or breakage.
- Code reading window dirt
Any dirt or dust adhering to the clear plate of the code reading window will adversely affect reading performance.
When using in dusty areas, check regularly whether any dust has accumulated on the clear plate of the code reading window, and if so, first blow the dust away with an airbrush, and then gently wipe the plate with a cotton swab or similar soft object.
If sand or hard particles have accumulated, rubbing the plate will result in scratches. Blow the particles away with an airbrush or wipe with a soft brush.

Important Notice of Disinfection and Maintenance for DENSO WAVE AUTO-ID Products.

As described in the care and maintenance of the Operator's Guide contained in the package of regular AUTO-ID products, the usage of thinner and alcohol for cleaning is prohibited. In consideration of the global spread of the new coronavirus infection, DENSO WAVE performed the wiping test under its own test standards using 70% ethanol or 10 ppm to 80 ppm hypochlorous acid water in expectation of a certain disinfection effect.

Chapter3 Preparation before use

3.1 Fastening the wrist strap

Fasten the wrist strap to the BHT-1408QUMWB as shown on the right.

3.2 Inserting and removing the main battery

Inserting

Insert the battery securely from the battery terminal side.

- ① Set the battery cover.
- ② Press from above in the direction of the arrow.
- ③ Press down and slide the battery cover lock in the direction indicated by the arrow to lock the cover.

Removing

- ① Push the battery cover lock in the arrow direction.
- ② Remove the unlocked cover.
- ③ Pull out the battery.

3.3 Charging

The main battery may not be fully charged for shipment. Please charge the main battery to full before using the BHT. You may use the Battery Charger. Please refer to the Battery Charger Operator's Guide for more information.

Charging time

Battery

Provides the power required for BHT operation. An empty battery takes approximately 5 hours to complete charging. The status indicator at the top of the screen will light red during charging, and will light blue when charging is complete.

Sub-battery

The sub-battery is installed inside the BHT. The sub-battery is used to hold data while the battery is being replaced and removed. After installing the battery and fully charging the empty sub-battery, it will take approximately 10 minutes to complete charging. To preserve the data correctly, do not remove the battery during this time.

Charging temperature

For efficient battery charging, we recommend charging at room temperature (18°C to 25°C).

Charging stops when the product detects that the ambient temperature has fallen below 0°C or has exceeded 40°C. However, the temperature may differ from that in the actual operating environment.

Operation on Battery Power

When 802.11b/g/n and Bluetooth® are all enabled on battery power, the main battery level will drop down substantially. Prolonged use of the display and continued scanning of barcodes or RF tag will also affect battery level. For operations which take a large amount of battery power, we suggest that you keep a fresh battery for replacement at all times.

- Remove the battery from the BHT or the Battery Charger then store in a cool and dry place if not using the BHT for an extended period of time.
- Storing a battery for a long period under the condition below may deteriorate the performance and life of the battery:
 - Storing a fully charged battery (just after completely charged battery)
 - Storing a depleted battery (too depleted to turn on the BHT)
- For long-term storage, storing the battery at the 50% of the power level is recommended.
- During long-term storage, charge the battery fully once a year in order to maintain the battery performance. When fully charged, allow the battery to discharge down to the recommended level before storing.

3.4 Inserting and Removing the microSD Card

Note: In order to power on the BHT, the battery must be secured in place. When using the BHT under the low temperature environment such as inside the refrigerated room, power on the BHT at the ambient temperature and then take it to the low temperature environment. Powering on the BHT at the low temperature may not start up the BHT successfully. Operating the BHT under the low temperature environment may result in the delayed BHT operation or extremely reduced operating time due to the battery characteristics. Please verify the operating conditions prior to use.

Replace a battery within three minutes after ensuring that the power of BHT is turned OFF. If it takes more than three minutes, the data retention may not be secured. If any of the following messages appears when the power is turned ON after the battery is replaced, take an appropriate action.

Displayed Message	Solution
"Set the current date and time".	When the BHT power is turned ON after a long period of non-use, you may need to reset the date and time. If this error message displays on the screen, you need to set the current date and time.
"Contact your administrator (XXXX)".	If this message displays on the screen, reboot the BHT. If this error persists, take a note on the error message and then contact the system administrator.

4.2 Reading RF Tags/Codes

4.3 Battery Power Level Indicator

The main-battery power level can be confirmed at the battery icon displayed in the top left of the LCD screen. Since the indicator shows only a rough estimate of main-battery power not an accurate remaining power level, please be charged early. The main-battery power level indicator shows only a rough estimate of battery power not an accurate remaining power level. Please read Safety Precautions to ensure the proper use of the battery.

The battery power level can be confirmed at the battery icon  displayed in the bottom left of the LCD screen. The battery power is indicated in four levels. The battery power level indicator tells you when to charge the battery.

	Sufficient battery power remains.
	The battery power is partially depleted. Charge promptly.

3) Auto power OFF

The power turns OFF itself when the BHT is not used for the specified period of time set at the user program. This set to 3 minutes at default when the BHT is shipped from the factory.

* Refer to the Programmer's Manual for further details of auto power OFF.

4.5 Using the BHT after Long Non-Use

Data stored in the BHT may be lost or damaged and the calendar clock may stop if the BHT is left unused for a long period of time.

- Keep a backup copy of important or critical information.
- Reset the calendar clock if it is stopped.
- The battery is also used as a memory back-up source. You should not remove it from the BHT for at least 10 minutes until the sub battery is fully charged.
- Keep the battery cover closed to prevent contamination.

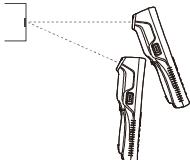

Please refer to the User's Manual for more information on trouble shooting.

Chapter5 When Unable to Successfully Read/Write RF tag or read Codes

5.1 When an RF tag cannot be read/written correctly

	Cause	Countermeasure
Effect of metal	When an RF tag is placed on a metal plate, it may not be read/written.	Keep an RF tag 15 cm or more away from a metal plate.
Effect of electromagnetic noise	If you use the BHT near electric appliances which generate electromagnetic noise, including an inverter fluorescent light, microwave oven, and electromagnetic cooking device, etc., it may not be able to read and write RF tags.	Do not use the BHT near electric appliances which generate electromagnetic noise, including an inverter fluorescent light, microwave oven, and electromagnetic cooking device, etc.
Radio interference	If there is any other RFID device near the BHT, it may not be able to read/write RF tags. If the BHT is used near other radio devices such as an amateur radio station, it may not be able to read/write RF tags.	Do not use the BHT near other RFID devices. Do not use the BHT near other radio devices such as an amateur radio station.
Distance from an RF tag	If the distance from an RF tag is too close or too far, the BHT may not be able to read/write it. The writable distance may be shorter than the readable distance.	The readable and writable distances vary according to the RF tag type. Slowly move the BHT toward and away from an RF tag to find the readable and writable distances.

5.2 When Unable to Successfully Read Codes

	Cause	Countermeasure
Specular reflection	When the light is focused on the printed surface of the code from directly above, the BHT may not read the code due to specular reflection.	Change the BHT reading angle and try again. 
Distance from code	The code may not be read if it is too close to or too far from the BHT reading window, even when the code is within the read area.	Move the BHT slowly toward or away from the code and try again.
Code surface curvature	The code may not be read if its surface is extremely curved.	Read the code at the center of the code reading window.
Code surface dirt	The code may not be read if its surface is dirty.	Wipe the dirt from the code and try again.
Code reading window dirt	The code may not be read if the code reading window is dirty.	Blow any dust away with an airbrush, and then gently wipe the reading window with a cotton swab or similar soft object.
Direct sunlight, ambient light	Code reading may be adversely affected by direct sunlight or the brightness of the surrounding light.	Read the code away from direct sunlight. Adjust the brightness of the surrounding light when reading indoors.

Chapter6 Troubleshooting Guide

6.1 The BHT is not turned ON

- Make sure that the battery is properly inserted into the BHT.
- Check the battery power level and charge the battery if necessary.
- Wipe any dirt from the battery and BHT terminals.

6.2 The Battery cannot be charged

- Make sure that the dedicated battery charger is being used.
- Make sure that the battery has been properly placed on the BHT.
- Make sure that the battery has been properly placed on the battery charger.
The Indicator LED will turn red when properly placed on the battery charger.
- Wipe any dirt from the battery and battery charger terminals.
- If the battery in use has been repeatedly charged three hundred times or more or it has been more than one year since the battery started to be used, replace it with a new one to avoid any trouble caused by the deteriorated battery.

6.3 Unable to communicate with host PC using communication unit

The BHT-1408QUMWB does not have an IrDA interface. The communication unit corresponding to the communication function is CU-AU1-14, CU-AR1-14, CU-AL1-14.

- Check whether the CU model is compatible.
- Make sure that the BHT has been properly placed on the communication unit.

6.3 The BHT accidentally turns OFF

- Make sure that the battery has been fully charged.
If not, charge the battery.
- The BHT may be set to auto power OFF. If so, the BHT will automatically turn OFF when it is not used for the specified period of time.
The auto power OFF setting can only be changed with the user program.

If the BHT cannot be turned ON even after going through all the above measures, there is a possibility that the charger is broken. Notify the system administrator.
Refer to the User's Manual for appropriate measures if an error message is displayed on the BHT during the operation.

FCC Regulation (for United States of America)

FCC Compliance Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures;

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC CAUTION:

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

The available scientific evidence does not show that any health problems are associated with using low power wireless devices. There is no proof, however, that these low power wireless devices are absolutely safe. Low power wireless devices emit low levels of radio frequency energy (RF) in the microwave range while being used. Whereas high levels of RF can produce health effects (by heating tissue), exposure of low-level RF that does not produce heating effects causes no known adverse health effects. Many studies of low-level RF exposures have not found any biological effects. Some studies have suggested that some biological effects might occur, but such findings have not been confirmed by additional research. This RF Tag Handy Terminals (BHT-1408QUMWB) has been tested and meets the FCC RF exposure guidelines when used with the accessory, Waist Case (WHBHT-M60/S40/S30). Use of other accessories may not ensure compliance with FCC RF exposure guidelines.

This device contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s). Operation is subject to the following two conditions:

1. This device may not cause interference.
2. This device must accept any interference, including interference that may cause undesired operation of the device.

L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

1. L'appareil ne doit pas produire de brouillage;
2. L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Les connaissances scientifiques dont nous disposons n'ont mis en évidence aucun problème de santé associé à l'usage des appareils sans fil à faible puissance. Nous ne sommes cependant pas en mesure de prouver que ces appareils sans fil à faible puissance sont entièrement sans danger. Les appareils sans fil à faible puissance émettent une énergie fréquence radioélectrique (RF) très faible dans le spectre des micro-ondes lorsqu'ils sont utilisés. Alors qu'une dose élevée de RF peut avoir des effets sur la santé (en chauffant les tissus), l'exposition à de faibles RF qui ne produisent pas de chaleur n'a pas de mauvais effets connus sur la santé. De nombreuses études ont été menées sur les expositions aux RF faibles et n'ont découvert aucun effet biologique. Certaines études ont suggéré qu'il pouvait y avoir certains effets biologiques, mais ces résultats n'ont pas été confirmés par des recherches supplémentaires. Ce RF Tag Handy Terminals (BHT-1408QUMWB) a été testé et est conforme aux règles d'exposition aux fréquences radioélectriques (RF) de l'ISDE lorsqu'il est utilisé avec l'accessoire Waist Case (WHBHT-M60/S40/S30). L'usage d'autres accessoires ne garantit pas nécessairement la conformité aux règles d'exposition aux RF de l'ISDE.
